Environmental Separation of Heavy Metals Arup K. Sen Gupta, 2001-09-26 This new book explains advanced and emerging technologies for removing heavy metals from wastestreams and contaminated sites Separation processes of this type are critical for meeting stringent regulations of priority pollutants especially arsenic mercury and lead which the text treats in depth After explaining the chemistry of heavy metals and their transport in various media the work offers a comprehensive analysis of strategies for separating metals from groundwater wastewater contaminated soils and industrial sludges Both the basics and the applications of techniques such as ion exchange specialized sorbents novel membranes advanced precipitates and electrokinetic processes are presented with a view to current use and potential for future applications such as resource reuse Information in this volume enables engineers and other investigators to adapt and select the best means to remove and in certain instances recover heavy metals

Standard Electrode Potentials Involving Radicals in Aqueous Solution, 2015 We made recommendations for standard potentials involving select inorganic radicals in aqueous solution at 25 C These recommendations are based on a critical and thorough literature review and also by performing derivations from various literature reports We also summarized the data in tables of standard potentials Gibbs energies of formation radical pKa s and hemocoagulation equilibrium constants In all cases current best estimates of the uncertainties are provided An extensive set of Data Sheets is appended that provide original literature references summarize the experimental results and describe the decisions and procedures leading to each of the recommendations
