SystemC Kernel Extensions for Heterogeneous System Modeling Hiren Patel, Sandeep Kumar Shukla, 2006-01-16

SystemC Kernel Extensions for Heterogeneous System Modeling is a result of an almost two year endeavour on our part to understand how SystemC can be made useful for system level modeling at higher levels of abstraction Making it a truly heterogeneous modeling language and platform for hardware software co design as well as complex embedded hardware designs has been our focus in the work reported in this book

Synthesis of Embedded Software Sandeep Kumar Shukla, Jean-Pierre Talpin, 2010-08-05 Embedded software is ubiquitous today There are millions of lines of embedded code in smart phones and even more in systems responsible for automotive control avionics control weapons control and space missions Some of these are safety critical systems whose correctness timely response and reliability are of paramount importance These requirements pose new challenges to system designers This necessitates that a proper design science based on constructive correctness be developed Correct by construction design and synthesis of embedded software is done in a way so that post development verification is minimized and correct operation of embedded systems is maximized This book presents the state of the art in the design of safety critical embedded software It introduces readers to three major approaches to specification driven embedded software synthesis construction synchronous programming based approaches models of computation based approaches and an approach based on concurrent programming with a co design focused language It is an invaluable reference for practitioners and researchers concerned with improving the product development life cycle

Embedded Systems Design Based on Formal Models of Computation Ivan Radojevic, Zoran Salcic, 2011-06-15 Models of Computation for Heterogeneous Embedded Systems presents a model of computation for heterogeneous embedded systems called DFCharts It targets heterogeneous systems by combining finite state machines FSM with synchronous dataflow graphs SDFG FSMs are connected in the same way as in Argos a Statecharts variant with purely synchronous semantics using three operators synchronous parallel refinement and hiding The fourth operator called asynchronous parallel is introduced in DFCharts to connect FSMs with SDFGs In the formal semantics of DFCharts the operation of an SDFG is represented as an FSM Using this representation SDFGs are merged with FSMs so that the behaviour of a complete DFCharts specification can be expressed as a single flat FSM This allows system properties to be verified globally The practical application of DFCharts has been demonstrated by linking it to widely used system level languages Java Esterel and SystemC
