*The Ichthyoses* Heiko Traupe, 2012-12-06 It is a great pleasure for me to see this work in print As outlined by Dr Traupe at least 20 different types of ichthyosis have been identified to date This book will effectively help to establish a correct diagnosis as a basis for genetic counseling Dr Traupe proposes a new classification of the ichthyoses based on reasonable clinical criteria He lets the reader share in his enormous knowledge and safely guides him through the difficult field of nomenclature He describes the particular nature of these scaling disorders in a manner as simple as possible During the last few years research on ichthyosis has become a fascinating scientific challenge due to the introduction of novel investigative approaches The main advantage of this book lies in the fact that the author successfully combines recent achievements made in lipid analysis enzymology electron microscopy and molecular genetics Heiko Traupe began his career in dermatology 11 years ago as a resident in the Department of Dermatology in Munster As we were both interested in the genetic aspects of skin diseases this was the starting point of a most fruitful collaboration which is still continuing During our common work in Munster Dr Traupe was able thanks to his unceasing clinical curiosity to describe many novel aspects within the field of ichthyosis and I took pride in coauthoring papers on new items such as cryptorchidism as a feature associated with X linked recessive ichthyosis autosomal dominant lamellar ichthyosis and alopecia ichthyotica
