Visual Perception Part 1 Susana Martinez-Conde,S. Macknik, Maria M.

Martinez, Jose-Manuel Alonso, Peter U. Tse, 2006-10-05 This book presents a collection of articles reflecting state of the art research in visual perception specifically concentrating on neural correlates of perception Each section addresses one of the main topics in vision research today Volume 1 Fundamentals of Vision Low and Mid Level Processes in Perception covers topics from receptive field analyses to shape perception and eye movements A variety of methodological approaches are represented including single neuron recordings fMRI and optical imaging psychophysics eye movement characterization and computational modelling The contributions will provide the reader with a valuable perspective on the current status of vision research and more importantly with critical insight into future research directions and the discoveries yet to come Provides a detailed breakdown of the neural and psychophysical bases of Perception Presents never before published original discoveries Includes multiple full color illustrations

Visual Perception Lothar Spillmann, John S. Werner, 2012-12-02

This book presents an interdisciplinary overview of the main facts and theories that guide contemporary research on visual perception While the chapters cover virtually all areas of visual science from philosophical foundations to computational algorithms and from photoreceptor processes to neuronal networks no attempt has been made to provide an exhaustive treatment of these topics Rather researchers from such diverse disciplines as psychology neurophysiology anatomy and clinical vision sciences have worked together to review some of the most important correlations between perceptual phenomena and the underlying neurophysiological processes and mechanisms The book is thus intended to serve as an advanced text for graduate students and as a guide for all vision researchers to understanding current progress outside their specialized fields of interest Examines parallel processing of visual information Discusses links between physiologically measured receptive fields and psychophysically measured perceptive fields Presents a spatial sampling by the retina and cortical modules Covers signal transduction and the sites of adaptation Describes a single cell analysis of attention Discusses computational models of vision

Vision and visual perception, 1965 *Visual Perception* Steven Yantis, 2001

Nicholas Wade, Mike Swanston, 2013-03-05 Does the world appear the same to everyone Does what we know determine what we see Why do we see the world as we do Vision is our most dominant sense From the light that enters our eyes to the complex cognitive processes that follow we derive most of our information about what things are where they are and how they move from our vision Visual Perception takes a refreshingly different approach to this enigmatic sense From the function that vision serves for an active observer to the history of visual perception itself the third edition has been extensively revised updated and expanded while still preserving the essential features of historical context neurophysiology and independent thought that made the earlier editions so engaging Covering the perception of location motion object recognition and with up to date information on the workings of the visual brain the 3rd edition looks at how our ideas have been shaped not just by psychology but by art optics biology and philosophy The emphasis on understanding vision as a basis for action in the real world has also been expanded to cover seeing representations of all sorts whether they are pictures or computer generated displays The 3rd Edition of Visual Perception is a readable accessible and truly relevant introduction to the world of perception and will be welcomed by students of visual perception as well as anyone with a general interest in the mysteries and wonder of vision

Visual Perception Tom Cornsweet, 2012-12-02 Visual Perception explores fundamental topics underlying the field of visual perception including the perception of brightness and color the physics of light and the optics of the eye Although the text leans heavily on physical and physiological concepts explanations of the relevant physics and physiology are considered This book is organized into 16 chapters and begins with an overview of the relationship between information assimilation and the physiology of the visual system based on data gathered both in physiological and perceptual experiments More specifically this text discusses the nature of the human perceptual system in terms of the kinds of information that are assimilated from the world and how this selection of information is governed by the structure of receptors and the neural circuits that are connected to them The relationships between symbols and their corresponding physical and physiological variables are also examined Finally the book addresses the presence of strong lateral inhibition in the visual system and how it fits the concept of evolution This book is aimed at undergraduate and graduate students regardless of their academic backgrounds

Visual Perception Steven H. Schwartz, 2004 Provides a solid foundation for courses in visual perception Featuring hundreds of drawings and photos it covers the mechanisms and assessment of visual perception for ophthalmologic clinicians and psychologists in reader friendly fashion The book treats all topics relevant to monocular visual perception visual development color vision retinal and cortical physiology and more Also included are chapters on adaptation photometry spatial and temporal vision motion perception psychophysical and electrophysiological methodology and higher order cortical processing

Differences in Visual Perception Jules Davidoff, 2012-12-02 Differences in Visual Perception The Individual Eye examines the differences in visual perception that can occur in various circumstances when observers perceive the same event More specifically the book considers the distinction between what happens when a

person looks at the world directly and when he sits with his eyes closed and thinks This book is organized into five chapters and begins with an overview of differences in perception that are in operation for only a short time emphasizing the distinction between short and long term effects and at what point short becomes long The reader is then introduced to the development of perception touching on topics such as the nature nurture issue visual acuity and visual discrimination color vision space perception and attentional processes The ambiguity of the stimulus is also discussed along with the perceptual theory known as transactionalism how the visual world is interpreted and the nature of the input to the visual system The theme that runs throughout this work is the fact that the same external input does not necessarily bring about in all of us the same perception This book will prove useful to students as well as established researchers interested in visual perception and cognition

Visual Perception: Theory and Practice Terry Caelli, 2014-05-09 Visual Perception Theory and Practice focuses on the theory and practice of visual perception with emphasis on technologies used in vision research and in visual information processing Central areas of vision research including spatial vision motion perception and color are discussed Light and optics convolutions and Fourier methods and network theory and systems are also examined Comprised of nine chapters this book begins with an overview of language and processes underlying specific areas of vision such as measures of neural activity feature specificity and individual cells and psychophysics The reader is then systematically introduced to the more essential properties of light and optics relevant to visual perception the use of convolutions Fourier series and Fourier transform to model processes in visual perception and network theory and systems Subsequent chapters deal with the geometry of visual perception spatial vision the perception of motion and some specific issues in visual perception including color perception binocular vision and stereopsis This monograph is intended for students practitioners and investigators in physiology

Visual Perception Vicki Bruce, Patrick R. Green, Mark A. Georgeson, 1996 This edition contains over 460 additional references and the treatment of visual psychology in the early chapters has been extensively revised

Perception in Visual Communication. Evolution and Neurology of Vision Simon Valentin, 2015-05-06 Seminar paper from the year 2015 in the subject Biology Evolution grade 1 3 Karlsruhe Institute of Technology KIT ZAK Zentrum f r Angewandte Kulturwissenschaft course Visual Communication and Culture language English abstract Today in our fast moving computer driven lives we are exposed to a myriad of sensations every second and not only from the environment or nature around us but also from ceaseless attacks through our modern media that is mostly based on visual stimulation So the topic of perception is although it has been dealt with throughout the centuries from the stoic philosophy of the Greeks to modern neurologists a highly current one that affects us all and every day in an unprecedented way Not least as a popular American crime drama television series with the title Perception where an eccentric neuropsychiatrist uses his unique perception abilities to solve complex criminal cases and a modern theatre play Molly Sweeney by Brian Friel on stage at the moment at Theater Lindenhof in Melchingen Germany where the protagonist a young woman regained her eyesight through an

operation and could not cope with the overwhelming sensations show the current fascination of the topic In the following chapters I will draw attention to the basic principles of perception especially visual perception as well as the evolution concept and the functioning of our eyes to come to a better understanding of how we see things and the way our visual perception works

Social Psychology of Visual Perception Emily Balcetis, G. Daniel Lassiter, 2010-05-31 This volume synthesizes social cognitive ecological evolutionary neuroscience research showing that the way in which people perceive the world changes with their cognitions emotions goals motivations culture other factors traditionally considered exclusive to social personality cognitive psychology

Brain and Visual Perception David H. Hubel M.D., Torsten N. Wiesel M.D., 2004-10-14 This is the story of a hugely successful and enjoyable 25 year collaboration between two scientists who set out to learn how the brain deals with the signals it receives from the two eyes Their work opened up a new area of brain research that led to their receiving the Nobel Prize in 1981 The book contains their major papers from 1959 to 1981 each preceded and followed by comments telling how and why the authors went about the study how the work was received and what has happened since It begins with short autobiographies of both men and describes the state of the field when they started It is intended not only for neurobiologists but for anyone interested in how the brain works biologists psychologists philosophers physicists historians of science and students at all levels from high school to graduate level

Vision and Mind Alva Noë, Evan Thompson, 2002-10-25 The philosophy of perception is a microcosm of the metaphysics of mind Its central problems What is perception What is the nature of perceptual consciousness How can one fit an account of perceptual experience into a broader account of the nature of the mind and the world are at the heart of metaphysics Rather than try to cover all of the many strands in the philosophy of perception this book focuses on a particular orthodoxy about the nature of visual perception The central problem for visual science has been to explain how the brain bridges the gap between what is given to the visual system and what is actually experienced by the perceiver The orthodox view of perception is that it is a process whereby the brain or a dedicated subsystem of the brain builds up representations of relevant figures of the environment on the basis of information encoded by the sensory receptors Most adherents of the orthodox view also believe that for every conscious perceptual state of the subject there is a particular set of neurons whose activities are sufficient for the occurrence of that state Some of the essays in this book defend the orthodoxy most criticize it and some propose alternatives to it Many of the essays are classics Contributors G E M Anscombe Dana Ballard Daniel Dennett Fred Dretske Jerry Fodor H P Grice David Marr Maurice Merleau Ponty Zenon Pylyshyn Paul Snowdon and P F Strawson
