describe the outcomes of methods in neurophysiology for example functional magnetic resonance imaging behavioural psycholinguistics and neuropsychological lesion studies and provide brief introductions to the methods themselves They extend basic findings at the word and sentence level by considering how the mental processing of syntax and morphology relates to prosody discourse semantics and world knowledge They have divided the work into four parts concerned with word structure sentence structure processing syntax and morphology at the interfaces and a comparison of different models of syntactic and morphological processing in the neurophysiological domain The book is directed at graduate students and researchers in theoretical linguistics psycho and neurolinguistics neurophysiology and psychology
