Syntax Of The Verb Initial Languages:

Verb First Andrew Carnie, Sheila Ann Dooley, Heidi Harley, 2005-01-01 This collection of papers brings together the most recent crosslinguistic research on the syntax of verb initial languages Authors with a variety of theoretical perspectives pursue the questions of how verb initial order is derived and how these derivations play into the characteristic syntax of these languages Major themes in the volume include the role of syntactic category in languages with verb initial order the different mechanisms of deriving V initial order and the universal correlates of the order This book should be of interest to scholars who work on theoretical approaches to word order derivation typologists and those who work on the particular grammars of Celtic Zapotec Mixtec Polynesian Austronesian Mayan Salish Aboriginal and Nilotic languages **The Syntax of Verb Initial Languages** Andrew Carnie Assistant Professor of Linguistics University of Arizona, Dun Laoghaire Institute of Art Eithne Guilfoyle Head of Humanities, Design and Technology, 2000-05-31 This volume contains twelve chapters on the derivation of and the correlates to verb initial word order The studies in this volume cover such widely divergent languages as Irish Welsh Scots Gaelic Old Irish Biblical Hebrew Jakaltek Mam Lummi Straits Salish Niuean Malagasy Palauan K echi and Zapotec from a wide variety of theoretical perspectives including Minimalism information structure and sentence processing The first book to take a cross linguistic comparative approach to verb initial syntax this volume provides new data to some old problems and debates and explores some innovative approaches to the derivation of verb initial order The Syntax of the Verb Initial Languages Andrew Carnie, Eithne Guilfoyle, 2003 *The Syntax of Verb Initial Languages* Andrew Carnie, Eithne Guilfoyle, 2000-06-29 This volume contains twelve chapters on the derivation of and the correlates to verb initial word order The studies in this volume cover such widely divergent languages as Irish Welsh Scots Gaelic Old Irish Biblical Hebrew Jakaltek Mam Lummi Straits Salish Niuean Malagasy Palauan K echi and Zapotec from a wide variety of theoretical perspectives including Minimalism information structure and sentence processing The first book to take a cross linguistic comparative approach to verb initial syntax this volume provides new data to some old problems and debates and explores some innovative approaches to the derivation of verb initial order Syntax of Verb Initial Languages, The. K. Erhard Voeltz, 2006-03-22 The twenty one papers that make up this volume reflect the broad perspective of African linguistic typology studies today Where previous volumes would present language material from a very restricted area and perspective the present contributions reflect the global interest and orientation of current African linguistic studies The studies are nearly all implicational in nature Based upon a detailed survey of a particular linguistic phenomenon in a given language or language area conclusions are drawn about the general nature about this phenomenon in the languages of Africa and beyond They represent as such a first step

that may ultimately lead to a more thorough understanding of African linguistic structures This approach is well justified Taking the other road attempting to pick out linguistic details from often fairly superficially documented languages runs the risk that the data and its implications for the structure investigated might be misunderstood Consequentially only very few studies of this nature giving the very broad perspective the overview of a particular structure type covering the whole African continent are represented here

Language Origins Maggie Tallerman, 2005-05-27 This book addresses central questions in the evolution of language where it came from how it relates to primate communication how and why it evolved how it came to be culturally transmitted and how languages diversified The chapters are written from the perspective of the latest work in linguistics neuroscience psychology and computer science and reflect the idea that various cognitive physical neurological social and cultural prerequisites led to the development of full human language Some of these evolutionary changes were preadaptations for language while others were adaptive changes allowing the development of particular linguistic characteristics The authors consider a broad spectrum of ideas about the conditions that led to the

evolution of protolanguage and full language Some examine changes that occurred in the course of evolution to Homo sapiens others consider how languages themselves have adapted by evolving to be learnable Some chapters look at the workings of the brain and others deploy sophisticated computer simulations that model such aspects as the emergence of speech sounds and the development of grammar All make use of the latest methods and theories to probe into the origins and subsequent development of the only species that has language The book will interest a wide range of linguists cognitive scientists biologists psychologists neuroscientists and experts in artificial intelligence as well as all those fascinated by issues puzzles and problems raised by the evolution of language
