Melt Crystallization Technology Tine Arkenbout-de Vroome, 1995-05-02 From the Author's Preface There is a growing demand for ultrapure organic compounds such as fine chemicals pharmaceuticals and basic materials for use in the polymer industry In quite a number of cases it is difficult or impossible to manufacture ultrapure organics efficiently using conventional separation techniques such as distillation Moreover conventional techniques usually require large amounts of energy To improve the purification efficiency of organics special techniques based on crystallization from the melt have been developed Melt crystallization meets industry's need for a highly selective separation process for organic compounds which operates at low enough temperatures to prevent thermal degradation Melt crystallization processes have the added advantage that they are energy efficient and ecologically sound Melt crystallization techniques appear to be particularly promising for upgrading organic materials and are one of the few routes that appear to be feasible for purifying starter materials for high tech polymers The aim of this book is to provide basic information on melt crystallization technology This monograph consists of three parts 1 basic principles 2 process options and 3 technical equipment and applicability This new book is the first unified guide and reference to an important chemical process technology It is comprehensive and organized for easy reference More

than 150 diagrammatic representations flow charts and photographs illustrate equipment and processes More than 40 tables provide useful reference data The Author Dr Arkenbout studied chemistry at the University of Utrecht and joined TNO the Netherlands Organization for Applied Scientific Research He has specialized in research on new separation processes and has had thirty of his articles on this subject published He recently retired from the position of manager of physical separation research but has remained active in this field through affiliations with the Laboratory of Solid State Chemistry at the University of Nijmegen the Laboratory for Process Equipment Delft University of Technology and TNO

Science and Technology of Crystal Growth J.P. van der Eerden,O.S.L. Bruinsma,2012-12-06 1 The ninth International Summer School on Crystal Growth ISSCG IX A complete theory of crystal growth establishes the full dependence of crystal size shape and structure on external parameters like temperature pressure composition purity growth rate and stirring of the mother phase implicitly establishing how the corresponding fields vary in space and time Such a theory does not exist however Therefore equipment to grow crystals is developed on the basis of partial knowledge Skill experience and creativity still are of central importance for the success of a crystal growth system In this book we collected contributions from the teachers of the ninth International Summer School on Crystal Growth ISSCG IX held 11-16 June 1995 at Papendal the national sports centre of the Netherlands These contributions were used during the lectures The authors have tried to present their work in such a way that only basic physical knowledge is required to understand the papers The book can be used as an introduction to various important sub disciplines of the science and technology of crystal growth Since however the information content considerably exceeds a lecture note level and touches the present limits of understanding it is an up to date handbook as well
