*The Evolution of Differentiation* William S. Bullough, 2013-10-22 The Evolution of Differentiation attempts to sketch the outlines of a framework from what is now known or suspected of the various aspects of differentiation in all types of organisms This book surveys the many aspects of differentiation that are seen today and in particular because of the evident universality of expression of the genetic code to enquire whether any similar universality exists in the methods of gene repression and activation The information reviewed ranges from the chemical control of the genetic mechanisms of unicellular organisms during their various phases of activity to the chemical control of differentiation in multicellular organisms both during embryonic development and in the adult state Finally some consideration is also given to that collapse of differentiation which leads to cancer

**The Evolution of Intermediary Institutions in Europe** Poul F Kjaer, Eva Hartmann, 2015-08-11 This book investigates the consecutive shifts between three types of intermediary institutions in the European context Corporatist Neo corporatist and Governance institutions It does so by combining insights from European Political Economy European Integration and governance studies and socio legal studies in the European context

**Advances in the Evolutionary Ecology of Termites** Alberto Arab, Solange Del Carmen Issa Ponce, Daniel Aguilera-Olivares, 2023-08-16 Termites are eusocial insects that live in colonies composed of hundreds to millions of individuals Their colonies are mainly organized into reproductive and non reproductive castes which have specific tasks such as nest construction foraging reproduction brood care and colony defense The evolution of the symbiotic association between termites and microorganisms allows them to decompose ingested lignocellulose from plant substrates such as wood including herbivore dung and soil humus making them important insect decomposers that play a crucial role in ecosystem functioning by contributing to litter decomposition soil formation and nutrient cycling On the other hand termites have recently been classified as eusocial cockroaches which have gained increasing attention in evolutionary studies to understand the transition to eusociality from subsocial wood roaches This current growing interest in termite research calls for a collection dedicated to these fascinating insects

**The Evolution of Language out of Pre-language** T. Givón, Bertram F. Malle, 2002-12-18 The contributors to this volume are linguists psychologists neuroscientists primatologists and anthropologists who share the assumption that language just as mind and brain are products of biological evolution The rise of human language is not viewed as a serendipitous mutation that gave birth to a unique linguistic organ but as a gradual adaptive extension of pre existing mental capacities and brain structures The contributors carefully study brain mechanisms diachronic change language acquisition and the parallels between cognitive and linguistic structures to weave a web of hypotheses and suggestive empirical findings on the origins of language

and the connections of language to other human capacities The chapters discuss brain pathways that support linguistic processing origins of specific linguistic features in temporal and hierarchical structures of the mind the possible co evolution of language and the reasoning about mental states and the aspects of language learning that may serve as models of evolutionary change **The Evolution of Man** Ernst Haeckel,1897 *The American Journal of the Medical Sciences* ,1919

**Political Economy in the Evolution of China's Urban-Rural Economic Relations** Fan Gao,2021-12-29 This book investigates the trajectory and evolutionary mechanisms of China s urban rural economic relationships seeking to explore how a developing socialist country can attain sustainable development and common prosperity Grounded in a deep literature review and a practical analysis of real world conditions in China the study challenges the dual economy theory of development economics that has prevailed in discussion of Chinese urban rural economic relationships and puts forward an alternative analytical framework based on political economy Considering the role political and social factors have played in China s economic development since 1949 the author divides the evolution of China s urban rural economic relationship into two stages In the first stage the relationship is seen to be a separated one a situation that led to several repercussions but the reform and opening up of the late 1970s marked a turning point leading to a second stage featured by imbalanced integration Through empirical research the book analyses the momentum economic effects and problems of this turn thereby envisaging an upgraded stage marked out by collaborative integration integral to further economic development and a more prosperous society in all respects The title will appeal to scholars and student studying political economy urban rural economic relationships development economics and the Chinese economy **The evolution of man; a popular exposition**

Altruism covers the primary findings on social evolution social trait and altruism from a population genetics standpoint to establish a system of genetic boxes It presents an evolutionary question with two faces Why are there so many social species Why in all the diversity of the animal kingdom are the social species so few To address the evolutionary question this book focuses on recognition of the fact that on an evolutionary time scale genetics must underlie all changes in the capacity for social structure and other aspects of organic evolution It presents comparative analyses framed in mathematical terms mathematical concepts as a means of getting outside human perhaps more generally primate and carnivore frames of reference and alternative network combinatorics as a natural basis for comparing social structures that are phylogenetically remote It also discusses the comparative biology of social behavior on a purely descriptive basis through the social and evolutionary structures emergent The book concludes by discussing major evolutionary pathways various kinds of preadaptedness for sociality and the use of cascade principle to suggest ways in which human evolution may have been a special case This book is a valuable resource for biologists social scientists researchers students and all those who want to

broaden their knowledge in the field of social behavior and altruism     *The Conservator* ,1893     *The Journal of the Linnean Society* Linnean Society of London,1920     **Systematics and Evolution** P.
