Two First Languages Jürgen M. Meisel, 2010-10-13 Language acquisition is a human endeavor par excellence As children all human beings learn to understand and speak at least one language their mother tongue It is a process that seems to take place without any obvious effort Second language learning particularly among adults causes more difficulty The purpose of this series is to compile a collection of high quality monographs on language acquisition The series serves the needs of everyone who wants to know more about the problem of language acquisition in general and or about language acquisition in specific contexts *Announcements and General Information* Virginia Junior College, 1922 **V.G.I. St. Paul's School** (Concord, N.H.). Bogi Society, 1908 **Book 1 & 2** William Blackstone, 1836 **Cyclopaedia of Biblical, Theological, and Ecclesiastical Literature** John McClintock, James Strong, 1877 **Transactions** Society of Biblical Archæology (London, England), 1876 *The Quarterly Journal of Pure and Applied Mathematics* James Joseph Sylvester, 1868 **Poor's**, 1929 **COVID and Emerging Infectious Diseases** William Tolbert, Neelakshi Gohain, 2024-02-13 Over the last two years with the strain of coronavirus having a devastating effect on the world's healthcare system and triggering a global lockdown one question that has emerged What or which infectious disease is going to hit us next Many infectious diseases prevalent in humans and animals are caused by pathogens that once emerged from other animal hosts In addition to these established or re-emerging infections new infectious diseases periodically emerge In extreme cases they may lead to pandemics as we currently are seeing The increased urbanization and globalization of the world order with faster connectivity and traveling has further increased the risk factors for emerging infections Despite this enormous progress has been made in the field of infectious disease in the last few decades The number of deaths and severe infections because of diseases like Malaria HIV Ebola Dengue Yellow fever virus YFV Zika etc have been significantly reduced and diseases like Polio are on the brink of eradication In particular the emergence of the devastating SARS CoV 2 pandemic has revolutionized the field in an unprecedented way A myriad of vaccine platforms and highly potent therapeutic approaches have been developed by government industry academic and non governmental organizations However the rapid and unparalleled spread of SARS CoV 2 and its variants and the amount of toll that it has caused to the public health and global economy also underscores the urgent need to develop broadly cross reactive rapidly deployable and scalable therapeutic platforms Development of these novel therapeutic modalities also requires a strong emphasis on the functional and mechanistic understanding of how molecular components in a biological process related to emerging infectious diseases work together Onset of the outbreaks of recent decades including but not limited to SARS CoV 1 MERS Ebola virus Zika virus Nipah virus Yellow fever virus Lassa virus and the ongoing ever devastating SARS CoV 2 pandemic also highlight the urgent need to devise a future proof pandemic preparedness strategy and the demand for a fast and early response
