The Language Of Pattern:

A Pattern Language Christopher Alexander, 1977-08-25 You can use this book to design a house for yourself with your family you can use it to work with your neighbors to improve your town and neighborhood you can use it to design an office or a workshop or a public building And you can use it to guide you in the actual process of construction After a ten year silence Christopher Alexander and his colleagues at the Center for Environmental Structure are now publishing a major statement in the form of three books which will in their words lay the basis for an entirely new approach to architecture building and planning which will we hope replace existing ideas and practices entirely The three books are *The Timeless Way of Building* *The Oregon Experiment* and this book *A Pattern Language* At the core of these books is the idea that people should design for themselves their own houses streets and communities This idea may be radical it implies a radical transformation of the architectural profession but it comes simply from the observation that most of the wonderful places of the world were not made by architects but by the people At the core of the books too is the point that in designing their environments people always rely on certain languages which like the languages we speak allow them to articulate and communicate an infinite variety of designs within a forma system which gives them coherence This book provides a language of this kind It will enable a person to make a design for almost any kind of building or any part of the built environment Patterns the units of this language are answers to design problems How high should a window sill be How many stories should a building have How much space in a neighborhood should be devoted to grass and trees More than 250 of the patterns in this pattern language are given each consists of a problem statement a discussion of the problem with an illustration and a solution As the authors say in their introduction many of the patterns are archetypal so deeply rooted in the nature of things that it seems likely that they will be a part of human nature and human action as much in five hundred years as they are today

A UML Pattern Language Paul Evitts, 2000 Social scientists whether earnest graduate students or tenured faculty members clearly know the rules that govern good writing But for some reason they choose to ignore those guidelines and churn out turgid pompous and obscure prose Distinguished sociologist Howard S Becker true to his calling looks for an explanation for this bizarre behavior not in the psyches of his colleagues but in the structure of his profession In this highly personal and inspirational volume he considers academic writing as a social activity Both the means and the reasons for writing a thesis or article or book are socially structured by the organization of graduate study the requirements for publication and the conditions for promotion and the pressures arising from these situations create the writing style so often lampooned and lamented Drawing on his thirty five years experience as a researcher writer and teacher Becker exposes the foibles of the academic profession to the light of sociological analysis and gentle humor He also offers eminently useful suggestions for ways to make social scientists better and more productive writers Among the topics discussed are how to overcome the paralyzing fears of chaos and ridicule that lead to writer s block how to rewrite and revise again and again how to adopt a persona compatible with lucid prose how to deal with that academic bugaboo the literature There is also a chapter by Pamela Richards on the personal and professional risks involved in scholarly writing In recounting his own trials and errors Becker offers his readers not a model to be slavishly imitated but an example to inspire Throughout his focus is on the elusive work habits that contribute to good writing not the more easily learned rules of grammar and punctuation Although his examples are drawn from sociological literature his conclusions apply to all fields of social science and indeed to all areas of scholarly endeavor The message is clear you don t have to write like a social scientist to be one
