The final goal of the design of a photovoltaic system is to come up with a cost effective efficient and reliable solar panel system for your home RV vehicle boat or business a solar system that squeezes the maximum possible power for every cent invested. In our opinion the main drawback of many solar books is that they give too much general information about solar panels and solar components and if you are lucky enough just one or two very basic design formulas. Those formulas however are far away from a proven yet simple system for sizing a solar system from scratch. Moreover such sizing information is buried in too much fillers and fluffs you could easily find by just surfing the web. Obviously such authors limit solar design methods to their own cases only. Ironically the reader s case rarely coincides with the authors solar case. You feel confused and lost without being aware of how to wire and put all the components of the solar power system together. The mission of this book is to fill this gap by offering a simple practical fast step by step approach for designing a solar system of any scale whether simple or complex intended for your home business RV vehicle or boat. The book is written by experts holding master s degree in electronics and is intended for those who cannot get started or are utterly confused.
