Thinking Green:

Responsible Business and Sustainable Development David Mhlanga, Mufaro Dzingirai, 2024-06-28 Responsible and sustainable business practices are becoming increasingly important in the information age as companies are realizing the need to address ethical and social issues associated with their operations. In today's interconnected world, businesses have access to vast amounts of data that can be used to improve their bottom line but can also pose significant risks to individuals and society. At the same time, responsible business practices have the capacity to positively impact international development goals such as poverty alleviation, economic growth, responsible consumption, and health and social welfare. This book presents a transdisciplinary framework for addressing the 2030 Sustainable Development Agenda, offering fresh perspectives from the Global South. It provides an overview of the key challenges and opportunities associated with responsible business practices in the information age, including the need to balance privacy and security concerns with data analytics and innovation. It also highlights some of the best practices and initiatives such as stakeholder engagement, transparency, and accountability. The book establishes the role of green leadership in promoting responsible production, discusses the importance of measuring and reporting on sustainable innovation, including the use of sustainability metrics and reporting frameworks. Further, it debates the importance of incorporating ethics and sustainability in strategic management practices. It provides a comprehensive understanding of the integration of these values in organizational decision making. By delving into the pressing matters that impact our world today, the book generates a sense of urgency and awareness among its audience. Its inclusive approach to exploring various perspectives and opinions invites readers to participate in a constructive dialogue, broadening their understanding and deepening their empathy for different viewpoints.

The Sources of Intentionality Uriah Kriegel, 2014 What do thoughts, hopes, paintings, words, desires, photographs, traffic signs, and perceptions have in common? They are all about something; they are directed, are contentful in a way. Chairs and trees, for example, are not. This book inquires into the source of this power of directedness that some items exhibit while others do not. An approach to this issue prevalent in the philosophy of the past half century seeks to explain the power of directedness in terms of certain items' ability to reliably track things in their environment. A very different approach, with a venerable history and enjoying a recent resurgence, seeks to explain the power of directedness rather in terms of an intrinsic ability of conscious experience to direct itself. This book attempts a synthesis of both approaches, developing an account of the sources of such directedness that grounds it both in reliable tracking and in conscious experience.
