intergroup relationships *Endogenous Social Identity and Group Choice* Florian Hett, Markus Kröll, Mario Mechtel, 2016 This paper tests social identity theory with respect to individuals self identification behavior We report results from a laboratory experiment in which subjects choose their group membership which is interpreted as decision to identify with the respective group Inducing a trade off between monetary payoffs and different group identification choices we elicit the respective implicit valuations of identifying with different groups The variation of these valuations is in line with the predictions from social identity theory Subjects have a higher valuation for identifying with groups with a higher status and with groups to which they have a smaller social distance Finally we show that this behavior predicts individual out group discrimination in allocation decisions which has previously been shown to be associated with social identity Overall our results provide strong support for the notion that individuals optimize behavior with respect to social identity

level can have many negative impacts across one's lifetime. These experiences can lead people on the autism spectrum and their families to avoid seeking help which can delay diagnosis and access to supportive services of not only autism itself but also co-occurring physical and psychological health needs. Prejudiced beliefs against autistic people may lead to many forms of discrimination including but not limited to medical education and employment discrimination. These attitudes can be built into society at a systemic level and influence policies that govern access to supports and our communities. Additionally, autism stigma and prejudice against autistic people such as stereotypical portrayals of autistic people in media and the language we use to describe autistic people can be invalidating to a person's autistic identity and to autistic culture. Further, the impacts of stigma and prejudice can be internalized by autistic individuals which may not only have poor effects on their wellbeing but also increase the want and/or need to mask or camouflage to pass as non-autistic. Masking or camouflaging can reduce a person's sense of belonging, self-esteem, sense of self-worth, and close relationships, all of which are associated with poor outcomes. It can also lead to avoidance of opportunities such as connection with other autistic individuals that could increase quality of life. This Research Topic aims to showcase evidence on why the stigma surrounding autism and the prejudice against autistic people are so detrimental. It hopes to provide insights into research and interventions on how stigma and prejudice can be tackled as well as awareness, understanding, and acceptance raised in the hope that the research presented will translate to best practice applications in clinical, public health, policy, and community settings. We invite researchers to submit a range of articles including but not limited to original research, articles, reviews, meta-analyses, opinions, perspectives, and case reports to provide new evidence on the following:

- Harmful impacts of stigma and prejudice on autistic people
- Interventions on reducing stigma surrounding and prejudice against autistic people
- Health promotion in autism: i) e approaches that increase the mental and physical well-being of autistic people
- Interventions targeted at increasing understanding of autism and neurodiversity as well as increasing acceptance and advocacy of as well as allyship with autistic people
- Examining intersectionality in autism stigma and/or prejudice towards autistic people of diverse backgrounds

Francis,2001 In matters such as affirmative action or home schooling rights of ethnic and other minority groups often come into conflict with those of society in a culturally diverse population such as ours But before considering the dilemmas posed by these issues we must first ask such basic but important questions as what group rights are and how they intersect with the principles of democracy This new collection brings together some of today s leading thinkers from the cutting edge of these debates taking in a broad range of issues confronting philosophers sociologists and political scientists Contributors such as Carl Wellman Carol Gould and Rex Martin examine the nature of groups and the conflict between group rights and democracy and also consider case studies depicting current issues in cultural ethnic and religious rights The first section on the nature of groups examines some of the perplexing alternatives in the formulation of a theory of group rights These articles investigate the kinds of rights minorities might claim and ask when groups can be held responsible for the acts of some of their members The second section addresses the treatment of groups in a democracy and the precarious balance between indifference toward minorities and capitulation to their demands Here the contributors examine five principles for the sensitive treatment of minority and disadvantaged groups in a democratic society A final section explores specific conflicts between subgroup and societal claims through case studies dealing with affirmative action religious practice and the education of children and the land rights of indigenous peoples By drawing on the legal and political dilemmas related to these cases the authors confront issues of core versus peripheral interests of individual member versus subgroup rights and of the possibilities for social openness raised in the preceding sections Written from varied perspectives Groups and Group Rights offers stimulating reading for both students and professionals as it takes on some of the most pressing dilemmas confronting our society
