Pugh, 1992 This work offers an introduction to software engineering for students in undergraduate courses in computing at university or college level defining it as the body of knowledge and practical techniques that can be brought to bear on the process of developing software This includes all types of software commercial applications programs scientific and engineering programs and systems software for example compilers operating systems and database management systems Design of the ACM curriculum and provides coverage of newer programming paradigms It is also intended for the use of practising workers in the software industry high level language a little knowledge of data structures one or two years programming experience and preferably involvement in at least one moderate sized project object oriented design and parallel programming as all of these have become increasingly important and in the case of parallel programming all pervasive in recent times and for the foreseeable future

Developing Intelligent Agent Systems Lin Padgham, Michael Winikoff, 2005-06-24 Build your own intelligent agent system Intelligent agent technology is a tool of modern computer science that can be used to engineer complex computer programmes that behave rationally in dynamic and changing environments Applications range from small programmes that intelligently search the Web buying and selling goods via electronic commerce to autonomous space probes This powerful technology is not widely used however as developing intelligent agent software requires high levels of training and skill The authors of this book have developed and tested a methodology and tools for developing intelligent agent systems With this methodology Prometheus developers can start agent oriented designs and implementations easily from scratch saving valuable time and resources Developing Intelligent Agent Systems not only answers the questions what are agents and why are they useful but also the crucial question how do I design and build intelligent agent systems The book covers everything a practitioner needs to know to begin to effectively use this technology including an introduction to the notion of agents a description of the concepts involved and a software engineering methodology Read on for a practical step by step introduction to designing and building intelligent agent systems a full life cycle methodology for developing intelligent agent systems covering specification analysis design and implementation of agents PDT Prometheus Design Tool software support for the Prometheus design process the example of an electronic bookstore to illustrate the design process throughout the book Electronic resources including the Prometheus Design Tool PDT can be found at <http://www.cs.rmit.edu.au/agents/prometheus> This book is aimed

at industrial software developers software engineers and at advanced undergraduate students It assumes knowledge of basic software engineering but does not require knowledge of Artificial Intelligence or of mathematics Familiarity with Java will help in reading the examples in chapter 10 **ACM Transactions on Software Engineering and Methodology** ,2005
