The potential impact of a video game is directly conditioned by its recognizability in the public conscience. But classifying video games in this manner can be a challenging endeavor. This paper emphasizes inconsistencies in recognition metrics and the absence of a unified system of classification. It approaches the problem through a twofold methodology involving a systematic literature review exploring existing classifications and genres, and an exploratory survey gathering data on spontaneously recognized video games in Spain. The study utilizes quantitative data to create three lists of video games—most played globally, most representative internationally, and most significant in the Spanish market. The findings reveal complexities in comparing video game data and underscore the importance of comprehensive research frameworks. The study contributes valuable insights into video game recognition dynamics among users, addresses the scarcity of comparative research in the gaming field, revealing the subjective impact of globally recognized video games and highlighting the possible relations between industry trends, spontaneous recognition, and consumer preferences.

## 1 Introduction

Video games, which are the foremost and most popular form of entertainment in the 21st century, have exhibited consistent growth and enduring popularity. Over the last few decades, they have evolved significantly in complexity, pervasiveness, and overall significance. However, the categorization of these games encounters persistent challenges. It is important to consider that any classification of video games is inherently destined for obsolescence, as the rapid technological evolution of video games continually alters the criteria that must be taken into account. There are various categorizations of video game genres based on gameplay and mechanics, such as Herz's (1997), which identifies the type of experience users can expect from a game. Herz initially identified different video game genre categories, which have since expanded alongside the industry's evolution. While this categorization system serves to classify video game titles by genre, it may not encompass the spontaneous recognition of certain titles in users' minds.
