Sanitary inspections are a well-established and widely applied practice. They can support water safety planning and in some contexts may be a simplified alternative to water safety plans. This publication presents the World Health Organization's WHO's sanitary inspection packages. These packages update the sanitary inspection forms in WHO's 1997 Guidelines for drinking water quality, Volume 3, surveillance and control of community supplies. With more than 25 years of practical experience with the application of sanitary inspections, these packages have been developed from a comprehensive evidence review and established good practices. Each package includes a sanitary inspection form supported by technical guidance and management advice to help ensure the ongoing safe management of small water supplies. These new tools support proactive risk management and drinking water quality surveillance across a broad range of water delivery scenarios and can be applied by health authorities, surveillance agencies, water suppliers and other stakeholders. As such, they are a valuable practical tool to help implement the recommendations in WHO's 2024 Guidelines for drinking water quality, small water supplies.
