

**Brain**  
The brain is the central organ of the nervous system. It is located in the head and is responsible for controlling and coordinating all of the body's activities. The brain is divided into two halves, the left and right hemispheres. Each hemisphere is further divided into four lobes: the frontal lobe, the parietal lobe, the temporal lobe, and the occipital lobe. The brain is made up of billions of neurons, which are specialized cells that transmit information throughout the body.

**Heart**  
The heart is a muscular organ that pumps blood throughout the body. It is located in the chest, between the lungs. The heart is divided into four chambers: the right atrium, the right ventricle, the left atrium, and the left ventricle. The right side of the heart pumps blood to the lungs, where it picks up oxygen. The left side of the heart pumps oxygenated blood to the rest of the body. The heart is made up of muscle and is surrounded by a protective layer called the pericardium.

**Stomach**  
The stomach is a large, muscular organ that is part of the digestive system. It is located in the upper abdomen. The stomach's main function is to break down food into smaller pieces that can be absorbed by the body. The stomach is made up of muscle and is lined with a protective layer called the mucosa. The stomach is connected to the esophagus at the top and the small intestine at the bottom.

**Lungs**  
The lungs are a pair of organs in the chest that are responsible for breathing. They are made up of millions of small air sacs called alveoli. The lungs take in oxygen from the air and release carbon dioxide from the body. The lungs are connected to the trachea, which is the windpipe. The lungs are surrounded by a protective layer called the pleura.

**Small Intestine**  
The small intestine is a long, narrow tube that is part of the digestive system. It is located in the abdomen. The small intestine's main function is to absorb nutrients from the food that has been broken down in the stomach. The small intestine is made up of three parts: the duodenum, the jejunum, and the ileum. The small intestine is connected to the stomach at the top and the large intestine at the bottom.

**Large Intestine**  
The large intestine is a thick, muscular tube that is part of the digestive system. It is located in the abdomen. The large intestine's main function is to absorb water and electrolytes from the food that has been broken down in the small intestine. The large intestine is made up of four parts: the cecum, the ascending colon, the transverse colon, and the sigmoid colon. The large intestine is connected to the small intestine at the top and the rectum at the bottom.
