Rethinking Logic: Logic in Relation to Mathematics, Evolution, and Method Carlo Cellucci, 2013-10-09 This volume examines the limitations of mathematical logic and proposes a new approach to logic intended to overcome them To this end the book compares mathematical logic with earlier views of logic both in the ancient and in the modern age including those of Plato Aristotle Bacon Descartes Leibniz and Kant From the comparison it is apparent that a basic limitation of mathematical logic is that it narrows down the scope of logic confining it to the study of deduction without providing tools for discovering anything new As a result mathematical logic has had little impact on scientific practice Therefore this volume proposes a view of logic according to which logic is intended first of all to provide rules of discovery that is non deductive rules for finding hypotheses to solve problems This is essential if logic is to play any relevant role in mathematics science and even philosophy To comply with this view of logic this volume formulates several rules of discovery such as induction analogy generalization specialization metaphor metonymy definition and diagrams A logic based on such rules is basically a logic of discovery and involves a new view of the relation of logic to evolution language reason method and knowledge particularly mathematical knowledge It also involves a new view of the relation of philosophy to knowledge This book puts forward such new views trying to open again many doors that the founding fathers of mathematical logic had closed historically trigger

Human Brain and Neuroplasticity , *From Monkey Brain to Human Brain* Stanislas Dehaene,2005 Leaders in cognitive psychology comparative biology and neuroscience discuss patterns of convergence and divergence seen in studies of human and nonhuman primate brains The extraordinary overlap between human and chimpanzee genomes does not result in an equal overlap between human and chimpanzee thoughts sensations perceptions and emotions there are considerable similarities but also considerable differences between human and nonhuman primate brains From Monkey Brain to Human Brain uses the latest findings in cognitive psychology comparative biology and neuroscience to look at the complex patterns of convergence and divergence in primate cortical organization and function Several chapters examine the use of modern technologies to study primate brains analyzing the potentials and the limitations of neuroimaging as well as genetic and computational approaches These methods which can be applied identically across different species of primates help to highlight the paradox of nonlinear primate evolution the fact that major changes in brain size and functional complexity resulted from small changes in the genome Other chapters identify plausible analogs or homologs in nonhuman primates for such human cognitive functions as arithmetic reading theory of mind and altruism examine the role of parietofrontal circuits in the production and comprehension of actions analyze the contributions of the prefrontal and cingulate cortices to cognitive control and explore to what extent visual recognition and visual attention are related in humans and other primates The Fyssen Foundation is dedicated to encouraging scientific inquiry into the cognitive mechanisms that underlie animal and human behavior and has long sponsored symposia on topics of central importance to the cognitive sciences
