Subcommittee on Social Security,1977     *Social Security Financing* Felicity Skidmore,1981 For most of its working life which began in 1935 the social security system has been the most popular and creditable social program in the United States Its benefits have grown over the years and not only in nominal terms but in real ones as well Public trust in its soundness has been as close to universal as its coverage which now stands at nearly 94 percent of the working population By the early 1970s however serious cracks in the financial underpinnings of the system began to be widely noted The crisis of public confidence that developed with some clamoring to get out of the system altogether realistically reflected financial difficulties that are apt to persist through the first half of the twenty first century based on current projections of declining birth rates causing a higher retiree worker ratio and productivity growth rates Social Security Financing faces up to these and related problems and proposes a range of workable solutions including alternative methods for financing the system that would overhaul its entire fiscal structure The book which is based on an intensive study sponsored by the Social Security Administration and conducted by Mathematica Policy Research and the National Institute for Advanced Studies in 1980 deals with both the economics and the politics of the issues involved Contents Alternate Methods of Social Security Financing Overview of the Symposium Felicity Skidmore Issues in Social Security Financing History and Policy Framework Marilyn Manser The Economic Effects of Social Security s OASI Program George F Break Financing Social Security A Reappraisal Richard A Musgrave Financing Social Security VAT Versus the Payroll Tax Charles E McLure Jr Political Perspective on Social Security Financing Peter N Stearns Sorting Out the Issues in Social Security Financing American Politics and Public Opinion D Garth Taylor     **Social Security Financing Recommendations** United States. Advisory Council on Social Security Financing,1959 The Future of Social Security Alicia H. Munnell,2010-12-01 From a modest beginning in 1935 to an income replacement scheme for workers in commerce and industry the social security system has grown to cover 90 percent of working Americans It now pays 78 billion a year in benefits and is obligated to pay 4 trillion in future retirement benefits to workers now covered With a projected tax rate of 30 percent of gross wages by the year 2050 to meet its obligations under current law the system in the author s words is at the most crucial juncture of its forty year life This comprehensive review and analysis the thirteenth in the Brookings series of Studies in Social Economics discusses social security in relation to other sources of retirement income and clarifies its financing problem benefit structure and ambivalent goals It deals with two main financing questions First will the payroll tax yield the revenue needed to pay benefits as the retired population rises as a fraction of the working population Second is the regressive social security tax really the best source of revenue for a system with welfare components such as the minimum benefit and dependents benefits Though such benefits are viewed as progressive they are not paid according to need They meet neither the income redistribution requirements nor the individual equity goals of the social security program The author provides a comprehensive account of the benefit structure and clarifies its relation not only to the basic goals of social security but also to the country s three tiered system of income security She offers recommendations for eliminating an irrational and correctable feature of the benefit formula for lowering the dependency ratio and most important for a definition of goals **Social Security: Simple & Smart** Tom Margenau,2025-03-04 The Social Security program touches the lives of Americans young and old Almost everyone has a Social Security number and a job that deducts Social Security taxes from his or her paycheck And more than 60 million Americans 1 out of every 6 people in the country collect a monthly Social Security check Social Security spending makes up about one fourth of the entire federal budget A program this big is bound to have complex laws and regulations Tom

**Future Social Security Financing Alternatives and National Saving** Michael J. Boskin, 1987

While the short run financial status of Social Security is secure its long run financial status is very uncertain The retirement and disability part of the system OASDI is projected to be in long run actuarial deficit under the Social Security Administration's intermediate economic and demographic forecasts Hospital Insurance HI is projected to run a large deficit beginning in the 1990s OASDI is projected to accrue a very large surplus over the next thirty years peaking at almost 30% of GNP Social Security has never accrued a surplus this large it may well be dissipated for other purposes such as to bail out HI fund other programs raise benefits or cut taxes These alternatives may affect net national saving directly because Social Security surpluses or deficits are part of government sector saving and indirectly through effects on private saving or the non Social Security part of the federal government budget This paper documents how various systematic deviations from or return to pay as you go finance of the Social Security system may affect net national saving For example under base case assumptions with respect to the non Social Security deficit a constant net private saving rate of 6% and long run budget balance in the state and local government sector the Social Security deficit offsets 40% of other net national saving over the Social Security Administration's 75 year projection period In the first 25 year sub period the Social Security surplus adds one sixth to other net national saving in the second it offsets almost one half and in the third it offsets five sixths of other net national saving Of course private saving may respond to changes in Social Security's funding as may the non Social Security balance in the federal budget The paper presents several alternative scenarios such as benefits increasing or taxes falling during the OASDI surplus period various stylized rules concerning the non Social Security budget deficit and separate balancing of HI via outlay reductions or tax increases The results indicate that OASDI may effect net national saving substantially For example if benefits ratchet up during what would have been the period of the OASDI surplus the OASDI system may subsequently offset virtually all of remaining net national saving On the other hand if HI is brought into balance and the OASDI surplus is allowed to accrue Social Security will offset only about 4% of other net national saving Changes in private saving may accentuate or ameliorate the swings in the net national saving rate generated by the future financing of OASDI but the alternative financing options will be important determinant of net national saving and therefore of private domestic investment and international capital flows
