Soft Computing in Industry 5.0 for Sustainability C Kishor Kumar Reddy, Thandiwe Sithole, Mariya Ouaisa, Özen ÖZER, Marlia M. Hanafiah, 2024-11-15 Soft computing and Industry 5.0 are two distinct concepts that when combined can have a significant impact on sustainability initiatives within various industries Soft computing is a subfield of artificial intelligence AI that aims to address problems characterized by uncertainty imprecision and partial truth It encompasses various computational techniques such as fuzzy logic neural networks genetic algorithms and machine learning which enable machines to deal with complex and uncertain data in a more human like manner Soft computing techniques are particularly valuable in sustainability efforts because they can handle non linear relationships and uncertain data that often arise in environmental and social contexts For example they can be used to optimize energy consumption waste management and resource allocation in industries by considering various factors and trade offs The book highlights the latest innovations in intelligent systems in classical machine learning deep learning Internet of Things IoT Industrial Internet of Things IIoT blockchain knowledge representation knowledge management big data and natural language processing NLP The book contains many contemporary articles from both scientists and practitioners working in many fields where soft computing intelligent systems and the IIoT can break new ground Intelligent systems and the Internet of Things are now essential technologies in almost every field From agriculture to industry to healthcare the scope of smart systems and IIoT is as wide as the horizon Nowadays these technologies are extensively used in developed countries but they are still at an early stage in emerging countries The primary market of this book is senior undergraduate students post graduate students practitioners researchers academicians industrialists and professionals working in areas of core computer science electrical engineering mechanical engineering environmental engineering and agricultural engineering The secondary audience of this book is individuals working in the areas of manufacturing agriculture remote sensing environmental engineering health care smart cities smart farming remote sensing supply chain management and hydrology

15th International Conference on Applications of Fuzzy Systems, Soft Computing and Artificial Intelligence Tools - ICAFS-2022 R. A. Aliev, J. Kacprzyk, W. Pedrycz, Mo. Jamshidi, M. B. Babanli, F. Sadikoglu, 2023-02-28 The general scope of the book covers diverse areas of fuzzy systems soft computing AI tools such as uncertain computation decision making under imperfect information deep learning and others The topics of the papers include theory and application of Soft Computing Neuro Fuzzy Technology Intelligent Control Deep Learning Machine Learning Fuzzy Logic in Data Analytics Evolutionary Computing Fuzzy logic and Artificial Intelligence in Engineering Social Sciences Business Economics Material Sciences and others This book presents the proceedings of the 16th International Conference on Applications of Fuzzy Systems Soft Computing and Artificial Intelligence Tools ICAFS 2022 held in Budva Montenegro on August 26 27 2022 This is a useful guide for academics practitioners and graduates in fields of fuzzy logic and soft computing It allows for increasing of interest in development and applying of these paradigms in various real life fields *Advances in Soft Computing* Rajkumar Roy, 1999 *Advances in Soft Computing* contains the most recent developments in the field of soft computing in engineering design and manufacture The book comprises a selection of papers that were first presented in June 1998 at the 3rd On line World Conference on Soft Computing in Engineering Design and Manufacturing Amongst these are four invited papers by World renowned researchers in the field Soft computing is a collection of methodologies which aim to exploit tolerance for imprecision uncertainty and partial truth to achieve tractability robustness and low solution cost The area of applications of soft computing is extensive Principally the constituents of soft computing are fuzzy computing neuro computing genetic computing and probabilistic computing The topics in this book are well focused on engineering design and manufacturing This broad collection of 43 research papers has been arranged into nine parts by the editors These include Design Support Systems Intelligent Control Data Mining and New Topics in EA basics The papers on evolutionary design and optimisation are of particular interest Innovative techniques are explored and the reader is introduced to new highly advanced research results The editors present a unique collection of papers that provide a comprehensive overview of current developments in soft computing research around the world **Forging New Frontiers: Fuzzy Pioneers I** Masoud Nikravesh, Lofti A. Zadeh, 2007-09-27 The 2005 BISC International Special Event BISCSE 05 Forging the frontiers was held in the University of California Berkeley Where fuzzy logic began from November 3 6 2005 The successful applications of fuzzy logic and its rapid growth suggest that the impact of fuzzy logic will be felt increasingly in coming years Fuzzy logic is likely to play an especially important role in science and engineering but eventually its influence may extend much farther In many ways fuzzy logic represents a significant paradigm shift in the aims of computing a shift which reflects the fact that the human

mind unlike present day computers possesses a remarkable ability to store and process information which is pervasively imprecise uncertain and lacking in categoricity The chapters of the book are evolved from presentations made by selected participants at the meeting and organized in two books The papers include reports from the different front of soft computing in various industries and address the problems of different fields of research in fuzzy logic fuzzy set and soft computing The book provides a collection of forty four 44 articles in two volumes

Soft Computing in Industrial Applications Yukinori Suzuki, Seppo J. Ovaska, Takeshi Furuhashi, Rajkumar Roy, Yasuhiko Dote, 2012-12-06 This book contains recent theoretical innovations and a comprehensive collection of industrial applications in the emerging field of Soft Computing Soft computing is a new form of artificial intelligence and it consists of four core methodologies Fuzzy Computing Neuro Computing Evolutionary Computation and Probabilistic Computing These individual techniques are clearly complementary or synergistic rather than competitive Therefore it is a common practice to combine two or three methodologies when solving complex problems Also the systematic fusion of soft computing and hard computing is a highly potential alternative to be considered Soft computing methodologies are suitable for various real world applications because the available information and system knowledge are often imprecise un certain or partially even incorrect To handle such demanding conditions and obtain the required robustness with pure hard computing would typically be either very difficult or expensive This book is a unique collection of technical articles providing a thorough overview of the state of the art theory and industrial applications The core articles on evolutionary computation fuzzy computing and neuro computing are of particular interest to researchers and practicing engineers

Computationally Intelligent Hybrid Systems Seppo J. Ovaska, 2005 Each of the chapters illustrates the wide ranging applicability of the fusion concept in such critical areas as computer security and data mining electrical power systems and large scale plants motor drives and tool wear monitoring user interfaces and the World Wide Web aerospace and robust control Publisher s website
