Supporting Software Processes Through Software Process Modeling Marc I. Kellner,Carnegie-Mellon University,Software Engineering Institute,1990 [A Paradigm for Decentralized Process Modeling](#) I. Ben-Shaul,Gail E. Kaiser,2012-12-06 A Paradigm for Decentralized Process Modeling presents a novel approach to decentralized process modeling that combines both trends and suggests a paradigm for decentralized PCEs supporting concerted efforts among geographically dispersed teams each local individual or team with its own autonomous process with emphasis on flexible control over the degree of collaboration versus autonomy provided A key guideline in this approach is to supply abstraction mechanisms whereby pre existing processes or workflows can be encapsulated and retain security of their internal artifacts and status data while agreeing with other processes on formal interfaces through which all their interactions are conducted on intentionally shared information This book is primarily intended to provide an in depth discussion of decentralized process modeling and enactment technology covering both high level concepts and a full blown realization of these concepts in a concrete system Either the whole book or selected chapters could be used in a graduate course on software engineering software process or software development environments or even for a course on workflow systems outside computer science e g in a classical engineering department for engineering design or in a business school for business practices or enterprise wide management or in the medical informatics department of a health science institution concerned with computer assistance for managed care Selected portions of the book such as section 2 2 on Marvel could also be employed as a case study in advanced undergraduate software engineering courses A Paradigm for Decentralized Process Modeling is a valuable resource for both researchers and practitioners particularly in software engineering software development environments and software process and workflow management but also in electrical mechanical civil and other areas of engineering which have analogous needs for design processes environmental support and concurrent engineering and beyond to private and public sector workflow
