

By JAMES FALLON'S

The literature of the Age of Reason, which has grown into quite a substantial corpus in the last few years, has especially probed itself on the worth of its conceptual grasp. Thinking is separate from anything else, the writings have told us. But in the sea are affected by farmers in Missouri, and no solution, which ignores the connections can hope to succeed. Yet many of these same writers, dogged in their pursuit of COOT through the first chain, have been surprisingly quiet about similar inquiries into the political implications of environmental control. To the extent they have discussed politics at all, most of the environmental writers have either urged more government regulation of the soil corporations, or found good-hearted appeals for vague new ethics of cooperation and frugality.

Judged by these standards, Robert Mitterauer's new book is an impressive achievement. At the very least, it is the first distinct representation of a second generation of environmental thinking. The conclusion Mitterauer reaches when he carries his political theories to their limits are not always convincing, but at least the reader is confident that no important avenue has been left unexplored.

The book's first premise is a future of restricted resources, as growing population and diminishing resources reduce the world's per-capita wealth. While some writers have portrayed the "no-growth" society as a means of restoring Eden, to Mitterauer it is a prolegomenon of the future. In the best part of his book, he demonstrates that the end of economic expansion will open two additional strains on the shell which protect individual rights from governmental authority. First, the need to regulate nearly every activity from pleasure-driving to prostitution will dramatically enlarge the scope of interference with private lives. An unpleasant dilemma then arises: either the world's governments will not be able to control environmental problems before Malthus works his magic, or else they will, in which case, "Malthus compels us to recognize that the passage through the gates [of] ahead may be possible only under governments capable of enforcing obedience far more effectively than would be possible in a democratic setting. If the issue for mankind is survival, such governments may be unavoidable, even necessary."

Second, economic restrictions will deprive governments of an important social buffer: the steady, dependable expansion of the general economic pie, which increases the size of every-

that's clear without altering the proportions. The Western nation must nearly approximate this condition in England, and its narrow escape from the road, threat of general paralysis is all too apt an illustration of Mitterauer's warning: "In Malthus's terms, the question is whether the Mitterauer struggle that is likely to arise in such a drastically restricted economic society would not impose insupportable strains on the representative democratic political apparatus."

Mitterauer is not the first to outline these implications, but he examines them more thoroughly than others have done, and he carries out the project with his finely honed skill in exposition. But the book would have been far more persuasive if Mitterauer had been tougher on himself

about changing his evidence and setting his own narrative loose. The central Mitterauer case is built, his case is generally quite familiar, even such fly-by-night, though, deserves credit for reminding us of the risk of no-growth war, which is the great unexplored topic of the day: I cannot imagine whom he thinks he is "inspiring" with his long point that socialist governments are so confused and powerless in dealing with environmental constraints to see we the intellectuals, in a long section on "Human Values." Mitterauer makes one good point—about our inability to "identify" with people of other nations or future generations, and the consequent difficulty of affecting our behavior on their behalf—but accomplishes it with a lot of specious and

unnecessary talk about abstract moralistic considerations.

There are qualities—compared to a more serious student's proposal, with more ideas—ideas that in the past, evoked by the title itself and the jacket illustration of Atlas supporting the globe, and reinforced by the numerous lines of comment on "the human prospect" where "economic difficulties" would have sufficed. While Mitterauer's conclusions are hardly different from the oft-cited visions proffered by the likes of Thomas Malthus and Oswald Spengler, his book suffers from the attitude of over-inflationary certainty that can oppress those authors at their worst. The difficulty with such intransigent prognostications is this: at least the case when politicians have remained enough of themselves to be concerned and written about, the forces that affect their development have often changed in a basic way. What looks like tomorrow's problem today is nearly the exact problem when tomorrow rolls around. Just a little more than 10 years ago, a reputable publisher was putting out a book called "Population and Progress," which predicted that America's happy days were at an end because the more forward nations of the world would soon overtake us.

Mitterauer is certainly aware of the hazards of "straight-line" reasoning—the misconception that what's happened in the last 10 years will keep happening, at the same rate, for the next 10—and he picks his tone with conviction that no prediction is certain. But that does not keep him from leading specific arguments in a conclusively misleading way. To choose one example from many: "Obviously, there is an absolute limit to the ability of the earth to support or sustain the process of industrial activity, and there is reason to believe that we are now nearing toward that limit very rapidly." When we learn about this "absolute limit," it turns out to be the earth's capacity for absorbing heat from industrial processes—a limit we would reach some 100 years from now in the unlikely event that industrial activity kept growing until then at the forward pace of the last 50 years.

Mitterauer also makes, and overstates, the familiar inter-relationship argument: we had better do something for the poor before they do something to us. Those of us who sympathize with Mitterauer's ends may wish this to be true; it would at least provide a concrete reason for charity. But experience to date shows that the general idea, where quite simply beyond our best, while the currently visible (and) of those at the commands of empire (Mitterauer) can justify the wealthy nations in their struggles.

Even with these problems, it is better to have the book than not to be waiting for it, because it addresses the debate another large step. ■
