Bowker, Ed, 2004      *Excerpta Medica*, 1989      **The CHORCH Approach: How to Model B2Bi Choreographies for  
Orchestration Execution** Andreas Schönberger, 2012 The establishment and implementation of cross organizational  
business processes is an implication of today's market pressure for efficiency gains In this context Business To Business  
integration B2Bi focuses on the information integration aspects of business processes A core task of B2Bi is providing  
adequate models that capture the message exchanges between integration partners Following the terminology used in the  
SOA domain such models will be called choreographies in the context of this work Despite the enormous economic  
importance of B2Bi existing choreography languages fall short of fulfilling all relevant requirements of B2Bi scenarios  
Dedicated B2Bi choreography standards allow for inconsistent outcomes of basic interactions and do not provide  
unambiguous semantics for advanced interaction models In contrast to this more formal or technical choreography languages  
may provide unambiguous modeling semantics but do not offer B2Bi domain concepts or an adequate level of abstraction  
Defining valid and complete B2Bi choreography models becomes a challenging task in the face of these shortcomings At the  
same time invalid or underspecified choreography definitions are particularly costly considering the organizational setting of  
B2Bi scenarios Models are not only needed to bridge the typical gap between business and IT but also as negotiation means  
among the business users of the integration partners on the one hand and among the IT experts of the integration partners  
on the other Misunderstandings between any two negotiation partners potentially affect the agreements between all other  
negotiation partners      **Forthcoming Books** Rose Arny, 2003      **High-Performance Embedded Computing** Marilyn
