Sperner Theory:

Sperner Theory Konrad Engel, 1997-01-28 The starting point of this book is Sperner's theorem which answers the question What is the maximum possible size of a family of pairwise with respect to inclusion subsets of a finite set This theorem stimulated the development of a fast growing theory dealing with external problems on finite sets and more generally on finite partially ordered sets This book presents Sperner theory from a unified point of view bringing combinatorial techniques together with methods from programming linear algebra Lie algebra representations and eigenvalue methods probability theory and enumerative combinatorics Researchers and graduate students in discrete mathematics optimisation algebra probability theory number theory and geometry will find many powerful new methods arising from Sperner theory [Sperner Theory in Partially Ordered Sets](#) Konrad Engel, Hans-Dietrich O. Sperner Theory in Partially Ordered Sets Konrad Engel, Hans-Dietrich O. F. Gronau, 1985 **Extremal Finite Set Theory** Daniel Gerbner, Balazs Patkos, 2018-10-12 Extremal Finite Set Theory surveys old and new results in the area of extremal set system theory It presents an overview of the main techniques and tools shifting the cycle method profile polytopes incidence matrices flag algebras etc used in the different subtopics The book focuses on the cardinality of a family of sets satisfying certain combinatorial properties It covers recent progress in the subject of set systems and extremal combinatorics Intended for graduate students instructors teaching extremal combinatorics and researchers this book serves as a sound introduction to the theory of extremal set systems In each of the topics covered the text introduces the basic tools used in the literature Every chapter provides detailed proofs of the most important results and some of the most recent ones while the proofs of some other theorems are posted as exercises with hints Features Presents the most basic theorems on extremal set systems Includes many proof techniques Contains recent developments The book's contents are well suited to form the syllabus for an introductory course About the Authors Daniel Gerbner is a researcher at the Alfréd Rényi Institute of Mathematics Hungarian Academy of Sciences in Budapest Hungary He holds a Ph.D. from Eötvös Loránd University Hungary and has contributed to numerous publications His research interests are in extremal combinatorics and search theory Balazs Patkos is also a researcher at the Alfréd Rényi Institute of Mathematics Hungarian Academy of Sciences He holds a Ph.D. from Central European University Budapest and has authored several research papers His research interests are in extremal and probabilistic combinatorics **Information Theory, Combinatorics, and Search Theory** Harout Aydinian, Ferdinando Cicalese, Christian Deppe, 2013-03-09 This volume is dedicated to the memory of Rudolf Ahlswede who passed away in December 2010 The Festschrift contains 36 thoroughly refereed research papers from a memorial symposium which took place in July 2011 The four macro topics of this workshop theory of games and strategic planning combinatorial group testing and database mining computational biology and string matching information coding and spreading and patrolling on networks provide a comprehensive picture of the vision Rudolf Ahlswede put forward of a broad and systematic theory of
