Roger H. Wardman, 2017-09-04 *An Introduction to Textile Coloration: Principles and Practice*. The Publications Committee of the Society of Dyers and Colourists (SDC) has been aware for some time of the need to produce a book at an introductory level aimed at personnel working in textile dyeing or printing companies, as well as those interested in entering into the field. The SDC runs a course for dyehouse technicians leading to the award of its Textile Coloration Certificate, and this book is intended to be helpful for candidates following the course. Additionally, it will be helpful for professionals in textile companies who do not have a strong scientific background so that they may attain a better understanding of the chemical principles of colour application. Starting with the basic science underlying dyeing and printing processes, this comprehensive book explains the fundamentals of dye and pigment chemistry and the various application techniques and processes. It offers chapter coverage of the general chemistry related to textiles: textile fibres, chemistry of dyes and pigments, industrial coloration methods, textile printing, theoretical aspects of dyeing, the measurement of colour, and fastness testing. Reference is made to developments that have taken place in the coloration industry in recent years, not least of which have been the challenges imposed by the drive towards environmentally friendly processes and restrictions on the use of certain chemicals. *An Introduction to Textile Coloration: Principles and Practice* covers atomic structure, chemical reactions, and acids, bases, and salts. Explains the nature of fibre-forming polymers and the conversion of synthetic polymers into fibre filaments. Educates on the classification of colorants and the commercial naming of dyes and pigments. Introduces readers to the dye application processes and dyeing machinery. Instructs on dye aggregation factors affecting colour appearance, the principles of colour fastness testing, and more. This is the sort of book any dyer, technician, student, or academic will want to always have as a ready reference to everything pertaining to textile coloration. Richard S. **Physico-chemical Aspects of Textile Coloration** Stephen M. Burkinshaw, 2015-11-30. The production of textile materials comprises a very large and complex global industry that utilises a diverse range of fibre types and creates a variety of textile products. As the great majority of such products are coloured predominantly using aqueous dyeing processes, the coloration of textiles is a large-scale global business in which complex procedures are used to apply different types of dye to the various types of textile material. The development of such dyeing processes is the result of substantial research activity undertaken over many decades into the physico-chemical aspects of dye adsorption and the establishment of dyeing theory, which seeks to describe the mechanism by which dyes interact with textile fibres. *Physico-Chemical Aspects of Textile Coloration* provides a comprehensive treatment of the physical chemistry involved in the dyeing of the major types of natural, man-made, and synthetic fibres with the principal types of dye. The book covers fundamental aspects of the physical and chemical structure of both fibres and dyes, together with the structure and properties of water in relation to dyeing. Dyeing is treated as an area of study, as well as the terminology employed in dyeing technology and science. Contemporary views of intermolecular forces and the nature of the interactions that can occur between dyes and fibres at a molecular level, fundamental principles involved in dyeing theory, as represented by the thermodynamics and kinetics of dye sorption, detailed accounts of the mechanism of dyeing that applies to cotton and other cellulosic fibres, polyester, polyamide, wool, polyacrylonitrile, and silk fibres, non-aqueous dyeing as represented by the use of air, organic solvents, and supercritical CO<sub>2</sub> fluid as alternatives to water as application medium. The up-to-date text is supported by a large number of tables, figures, and illustrations, as well as footnotes and widespread use of references to published work. The book is essential reading for students, teachers,
