**Textual Studies in Ancient and Medieval Geometry** Wilbur Richard Knorr, 1989-01-01 Textual Studies in Ancient and Medieval Geometry W.R. Knorr, 2012-12-06 For textual studies relating to the ancient mathematical corpus the efforts by the Danish philologist L. Heiberg 1854-1928 are especially significant Beginning with his doctoral dissertation *Quaestiones Archimedeae* Copenhagen 1879 Heiberg produced an astonishing series of editions and critical studies that remain the foundation of scholarship on Greek mathematical science For comprehensiveness and accuracy his editions are exemplary In his textual studies as also in the prolegomena to his editions he carefully described the extant evidence organized the manuscripts into stemmata and drew out the implications for the state of the text With regard to his Archimedean work Heiberg sometimes betrayed signs of the philologist's occupational disease the tendency to rewrite a text deemed on subjective grounds to be unworthy But he did so less often than his prominent contemporaries and not as to detract appreciably from the value of his editions In examining textual questions bearing on the Archimedean corpus he attempted to exploit as much as possible evidence from the ancient commentators and in some instances from the medieval translations It is here that opportunities abound for new work extending and in some instances superseding Heiberg's findings For at his time the availability of the medieval materials was limited In recent years Marshall Clagett has completed a mammoth critical edition of the medieval Latin tradition of Archimedes while the bibliographical instruments for the Arabic tradition are in good order thanks to the work of Fuat Sezgin

**On Pythagoreanism** Gabriele Cornelli, Richard McKirahan, Constantinos Macris, 2013-10-29 The purpose of the conference On Pythagoreanism held in Brasilia in 2011 was to bring together leading scholars from all over the world to define the status quaestionis for the ever increasing interest and research on Pythagoreanism in the 21st century The papers included in this volume exemplify the variety of topics and approaches now being used to understand the polyhedral image of one of the most fascinating and long lasting intellectual phenomena in Western history Cornelli's paper opens the volume by charting the course of Pythagorean studies over the past two centuries The remaining contributions range chronologically from Pythagoras and the early Pythagoreans of the archaic period (6th-5th centuries BCE) through the classical, hellenistic, and late antique periods to the eighteenth century Thematically they treat the connections of Pythagoreanism with Orphism and religion with mathematics, metaphysics, and epistemology and with politics and the Pythagorean way of life

**The Shaping of Deduction in Greek Mathematics** Reviel Netz,2003-09-18 The aim of this book is to explain the shape of Greek mathematical thinking It can be read on three levels as a description of the practices of Greek mathematics as a theory of the emergence of the deductive method and as a case study for a general view on the history of science The starting point for the enquiry is geometry and the lettered diagram Reviel Netz exploits the mathematicians practices in the construction and lettering of their diagrams and the continuing interaction between text and diagram in their proofs to illuminate the underlying cognitive processes A close examination of the mathematical use of language follows especially mathematicians use of repeated formulae Two crucial chapters set out to show how mathematical proofs are structured and explain why Greek mathematical practice manages to be so satisfactory A final chapter looks into the broader historical setting of Greek mathematical practice

Alfonso's Rectifying the Curved Ruth Glasner,Avinoam Baraness,2020-11-26 This volume offers a new English translation introduction and detailed commentary on Sefer Meyasher Aqov The Rectifying of the Curved a 14th century Hebrew treatise on the foundation of geometry The book is a mixture of two genres philosophical discussion and formal Euclidean type geometrical writing A central issue is the use of motion and superposition in geometry which is analyzed in depth through dialog with earlier Arab mathematicians The author Alfonso was identified by Gita Gluskina the editor of the 1983 Russian edition as Alfonso of Valladolid the converted Jew Abner of Burgos Alfonso lived in Castile rather far from the leading cultural centers of his time but nonetheless at the crossroad of three cultures He was raised in the Jewish tradition and like many Sephardic Jewish intellectuals was versed in Greek Arabic philosophy and science He also had connections with some Christian nobles and towards the end of his life converted to Christianity Driven by his ambition to solve the problem of the quadrature of the circle as well as other open geometrical problems Alfonso acquired surprisingly wide knowledge and became familiar with several episodes in Greek and Arabic geometry that historians usually consider not to have been known in the West in the fourteenth century Sefer Meyasher Aqov reflects his wide and deep erudition in mathematics and philosophy and provides new evidence on cultural transmission around the Mediterranean
