## **The Sea Scope:**

*Seascope Ecology* Simon J. Pittman, 2017-12-18 *Seascope Ecology* provides a comprehensive look at the state of the science in the application of landscape ecology to the seas and provides guidance for future research priorities. The first book devoted exclusively to this rapidly emerging and increasingly important discipline, it is comprised of contributions from researchers at the forefront of seascope ecology working around the world. It presents the principles, concepts, methodology, and techniques informing seascope ecology and reports on the latest developments in the application of the approach to marine ecology and management. A growing number of marine scientists, geographers, and marine managers are asking questions about the marine environment that are best addressed with a landscape ecology perspective. *Seascope Ecology* represents the first serious effort to fill the gap in the literature on the subject. Key topics and features of interest include: The origins and history of seascope ecology and various approaches to spatial patterning in the sea; The links between seascope patterns and ecological processes, with special attention paid to the roles played by seagrasses and salt marshes and animal movements through seascapes; Human influences on seascope ecology, including models for assessing human seascope interactions; A special epilogue in which three eminent scientists who have been instrumental in shaping the course of landscape ecology offer their insights and perspectives. *Seascope Ecology* is a must read for researchers and professionals in an array of disciplines including marine biology, environmental science, geosciences, marine and coastal management, and environmental protection. It is also an excellent supplementary text for university courses in those fields. **Seascope**

**Ecology: from characterization to evaluation of state and change over time** Monica Montefalcone, Carlo Nike Bianchi, 2023-08-22 Landscape ecology has been a discrete, established discipline since at least 1980. Its marine counterpart, seascope ecology, is barely a decade old, its first applications dating from the early 2010s. Lack of perception of the marine environment hampers the adoption of many landscape ecology approaches to the sea. Seascope ecology relies on special technologies such as remote sensing, either acoustic or optical, robotics, and scuba diving. Both disciplines deal with the spatial configuration of ecosystems and consider environmental heterogeneity and dynamics as the main subjects of study and the key for ecosystem functioning and persistence. Seascope is here intended as the totality of natural and anthropogenic characters of a marine region. To the geologist, it is defined by sedimentology and underwater geomorphology; to the biologist, by the nature of the living cover of the seafloor; to the ecologist, by the relationships among functional processes and the spatial organization of ecosystems. The goal of this research topic is to encourage original research, case studies, reviews, and viewpoints to identify research priority gaps and possibly contribute to filling them in. We will appreciate, in particular, manuscripts dealing with recent advances such as high-resolution habitat mapping, underwater soundscape, and biophony development, application, and validation of biotic indices to assess seafloor integrity, as requested for instance by recent European Directives. Papers of interest may discuss the multivarious facets of stability and describe resistance and resilience.
