

## Anthropocene: Age of Man

We live in the Holocene epoch, but many scientists argue that human impacts, like climate change and increased extinction rates, place us in a new epoch: the Anthropocene.

This infographic depicts the history of the Earth and the life that developed upon it. The Earth has been around for nearly 4.6 billion years and much has happened in that immense span of time, from global glaciations to massive asteroid impacts. Scientists have learned about the long, complex history of the planet by studying layers of rock in the Earth's crust. These layers contain fossils of plants and animals that lived on Earth, only a tiny fraction of which still exist today. By examining the composition of rocks and the types of fossils in them, scientists have created a timeline of Earth's history. It is broken up into sections based on major events, like global climate changes and mass extinctions. Use this infographic to explore the evolution of Earth and the life upon it.

## **The Age Of The Earth:**

*Age Of The Earth, The: A Physicist's Odyssey* Archibald W Hendry,2020-01-02 This book spells out in detail how the age of the Earth has been determined over the centuries First the biblical age how was the date of Creation 4004 BC figured out A date which is so important even today it is the basis of claims made by millions that the Earth is only about 6000 years old Next the response of geologists and Darwin for a very old Earth Then Kelvin s calculation of how long it would take for a hot Earth to cool down to its present state And finally today s answer billions based on the properties of radioactive materials So how old is Planet Earth

Francis Ö. Dudás,2020-02-13 Polls show almost half of US adults believe that Earth is only 10 000 years old whereas scientists consider our planet to be 4 56 billion years old Examining these conflicting views illuminates aspects of the perceived conflict between religion and science and helps us understand the battles between evolutionist and creationist advocates This book examines how we approach knowledge and how we look at certainty It disentangles the threads of the traditional knowledge we are taught from the knowledge we gain from our own investigation of truth It argues that nature the basis of science and scripture the basis of religion derive from a single source Because of their shared origins religious and scientific perspectives grounded in verifiable truths must be in harmony The book presents the science behind the reliability of isotopic dates and critiques young earth creationist attacks on isotopic studies Though the nature of time is a philosophical issue its measurement is a scientific venture that has affirmed that Earth is 4 56 billion years old The harmony of science and religion based on recognition of their single source is a prerequisite for the progress of humanity as a whole
