Clark, Mireille Consalvey, Ashley A. Rowden, 2016-04-18 The deep sea covers over 60% of the surface of the earth yet less than 1% has been scientifically investigated There is growing pressure on deep sea resources and on researchers to deliver information on biodiversity and the effects of human impacts on deep sea ecosystems Although scientific knowledge has increased rapidly in recent decades there exist large gaps in global sampling coverage of the deep sea and major efforts continue to be directed into offshore research Biological Sampling in the Deep Sea represents the first comprehensive compilation of deep sea sampling methodologies for a range of habitats It reviews the real life applications of current and in some instances developing deep sea sampling tools and techniques In creating this book the authors have been able to draw upon the experiences of those at the coal face of deep sea sampling expanding on the existing methodological texts whilst encompassing a level of technical detail often omitted from journal publications Ultimately the book will promote international consistency in sampling approaches and data collection advance the integration of information into global databases and facilitate improved data analyses and consequently uptake of science results for the management and conservation of the deep sea environment The book will appeal to a range of readers including students early career through to seasoned researchers as well as environmental managers and policy makers wishing to understand how the deep sea is sampled the challenges associated with deep survey work and the type of information that can be obtained

Into the Deep Karsten Schneider, Peter Batson, 2008 How inappropriate it was to name our planet Earth when quite clearly we should have called it Ocean 1 36 billion cubic kilometres of water 326 million cubic miles weighing over a million trillion tons covers more than 70 percent of our planet's surface Strip Earth of its topography and an uninterrupted ocean would submerge the planet under 2 500 metres 8 200 feet of water Earth's five oceans are one of the wonders of the solar system they cover the

Mid Atlantic Ridge our planet's most extensive mountain range host the Great Barrier Reef the largest structure built by living organisms and provide the habitat for Earth's most extreme lifeforms the denizens of the deep nightmarish apparitions bristling with fangs and fluorescence Yet despite its proximity and riches in many ways we know more about the surface of Mars than we know about the deep ocean From warm equatorial seas to ice bound polar oceans Into the Deep charts our exploration of Earth's final frontier and its inhabitants as it descends from bright coral reefs to the eternal cold darkness of the abyss It is a voyage that will astonish the reader just as the latest deep sea discoveries regularly confound scientists as they meet the Giant Squid's bigger brother the Colossal Squid and encounter the utterly alien environment that surrounds black smokers hydrothermal rifts in the Earth's crust The Silent Deep Julian Anthony Koslow,2007 Publisher description

Robert D. Ballard,Will Hively,2000 Until a few decades ago the ocean depths were almost as mysterious and inaccessible as outer space Oceans cover two thirds of the earth's surface with an average depth of more than two miles yet humans had never ventured more than a few hundred feet below the waves One of the great scientific and archaeological feats of our time has been finally to cast light on the eternal darkness of the deep sea This is the story of that achievement told by the man who has done more than any other to make it possible Robert Ballard Ballard discovered the wreck of the Titanic He led the teams that discovered hydrothermal vents and black smokers cracks in the ocean floor where springs of superheated water support some of the strangest life forms on the planet He was a diver on the team that explored the mid Atlantic ridge for the first time confirming the theory of plate tectonics Today using a nuclear submarine from the U S Navy he's exploring the ancient trade routes of the Mediterranean and the Black Sea for the remains of historic vessels and their cargo In this book he combines science history spectacular illustrations and first hand stories from his own expeditions in a uniquely personal account of how twentieth century explorers have pushed back the frontiers of technology to take us into the midst of a world we could once only guess at Ballard begins in 1930 with William Beebe and Otis Barton pioneers of the ocean depths who made the world's first deep sea dives in a cramped steel sphere He introduces us to Auguste and Jacques Piccard whose Bathyscaph descended in 1960 to the lowest point on the ocean floor He reviews the celebrated advances made by Jacques

Cousteau He describes his own major discoveries from sea floor spreading to black smokers as well as his technical breakthroughs including the development of remote operated underwater vehicles and the revolutionary search techniques that led to the discovery and exploration of the Titanic the Nazi battleship Bismarck ancient trading vessels and other great ships Readers will come away with a richer understanding of history earth science biology and marine technology and a new appreciation for the remarkable men and women who have explored some of the most remote and fascinating places on the planet
