

SENSATION (PSYCHOLOGY)

In psychology, sensation refers to the unique process of how people receive information through their senses, which include touch, taste, smell, sight, and hearing.

DEFINITION

According to Sanderson and Huffman:

"Sensation is the process by which we detect and convert (transduce) raw sensory data from our body and the environment, and then transmit it to our brain" (2023, p. 174).

The process of sensation in psychology includes identifying, communicating, and interpreting stimuli from our surroundings.

EXAMPLES

- **Feeling the sun on our skin:** Our skin receptors can detect heat from the sun and send a signal to the brain, which helps us feel the sensation of warmth on our skin.
- **Tasting our favorite food:** Our tongue's taste buds can detect different flavors - sweet, sour, salty, or bitter - and send this information to the brain for us to experience the taste.
