Tomahawk Cruise Missile:

The Tomahawk Cruise Missile Matthew Pitt, 2000 Describes the special features of the Tomahawk missile and how this weapon works and provides historical information as well as plans for future improvements of the Tomahawk *Optimizing Selection of Tomahawk Cruise Missiles* Scott D. Kuykendall, 1998 The Tomahawk Land Attack Cruise Missile TLAM launched from surface ships and submarines has become the weapon of choice for the United States in many situations In an ERA of high precision fast delivery weapons the method currently used for assigning TLAM engagements is out of step with the development of the weapons themselves Missile assignment today is manual with the potential consequences of inefficient missile to mission matching and unnecessary delay This thesis develops a new optimizing approach to missile to mission matching using integer programming In a matter of seconds for a single ship or a matter of minutes for a battle group the optimization model determines which missile to select for each tasking order and provides back up assignments if requested The objective of the model is to ensure the correct weapon is applied against each target while maximizing the potential of the firing units to perform future taskings The new missile to mission matching model is better than current methods and performs robustly in extensive sensitivity analyses The optimization model is currently being considered for shipboard implementation by the Naval Surface Warfare Center At the very least the model can be used to independently assess the performance of any new missile to mission matching decision support considered by the Navy *Analysis of the Tomahawk Cruise Missile* Gregory A. Longo, 1994 Tomahawk Cruise Missile Matthew Pitt, 2000-01 Describes the special features of the Tomahawk missile and how this weapon works and provides historical information as well as plans for future improvements of the Tomahawk **Tomahawk Cruise Missile** Nigel Macknight, 1995 In detailed text with over 70 photos and specially commissioned illustrations this title explores the development of the cruise missile in general examines the Tomahawk in particular and casts a glance into the future of this high tech cutting edge weapon *The Evolution of the Cruise Missile - Comprehensive History from the V-1 and V-2 to the Tomahawk and Snark, ALCM, SLCM, GLCM, Sperry Gyroscope, JATO* U. consider deployment and employment options It is also important that we understand the developmental process illustrated by the history of the cruise missile Without the perspective provided by this history our perceptions of their purpose and use lack depth and insight In actuality the cruise missile as an operational concept and system has been around for some time and very early on inspired rather far reaching claims A newspaper account in 1915 called it A device likely to revolutionize modern warfare Before World War I was over the cruise missile or the aerial torpedo as it was then called was touted as the gun of the future and compared in importance with the invention of gunpowder Billy Mitchell saw it as A weapon of tremendous value and terrific force to airpower The passing of years has not dimmed enthusiasm for the device a newspaperman in 1977 writing that Except for gunpowder and atomic bomb no weapon has threatened a greater effect on war and peace than the cruise missile More temperate comments also emphasize its importance The advent of the long range highly accurate cruise missiles one high official told Congress is perhaps the most significant weapon development of the decade According to Leslie Gelb a noted defense analyst The cruise missile could be an invaluable addition to our security or a dangerous complication

Harshberger,1991 This Note addresses near term development issues for an emerging class of weapons long range conventional missiles LRCMs defined as missiles capable of attacking targets with conventional nonnuclear munitions at ranges in excess of 500 kilometers The author identifies useful roles for the LRCM and determines that technologies beyond those of the Tomahawk are both necessary and available He recommends that the Navy focus its near term development on an upgraded Tomahawk Block IV while the Air Force moves toward a new LRCM design He finds that LRCMs are fiscally affordable and arms control regimes are being developed that address their political costs However institutional concerns may be the major stumbling block to LRCM development Data and support systems needed for operating LRCMs are not currently available and will require institutional changes in the services and the intelligence community The author makes recommendations for future technology and support policy decisions Signals ,1991
