Mital, Å. Kilbom, S. Kumar, 2000-01-31 There is an urgent need to disseminate ergonomics know how to the work place This book meets that need by providing clear guidelines and problem solving recommendations to assist the practitioner in decisions that directly protect the health safety and well being of the worker The guidelines have evolved from a series of symposia on Ergonomic Guidelines and Problem Solving Initially experts in each area selected were asked to write draft guidelines These guidelines were circulated to participants at the symposia and to other experts for review before being comprehensively revised In some instances these guidelines cannot be considered complete but it is important now to put some recommendations forward as guidelines It is hoped that as new research emerges each guideline will be updated Each guideline has been divided into two parts Part I contains the guidelines for the practitioner and Part II provides the scientific basis or the knowledge for the guide Such separation of the applied and theoretical content was designed to facilitate rapid incorporation of the guide into practice The target audience for this book is the practitioner The practitioner may be a manager production system designer shop supervisor occupational health and safety professional union representative labor inspector or production engineer For each of the guidelines relevant practitioners are described Topics covered include work space design tool design work rest schedules illumination and maintenance Information Control Problems in Manufacturing Technology 1989 E.A. Puente, L. Nemes, 2014-06-28 The Symposium presented and discussed the latest research on new theories and advanced applications of automatic systems which are developed for manufacturing technology or are applicable to advanced manufacturing systems The topics included computer integrated manufacturing simulation and the increasingly important areas of artificial intelligence and expert systems and applied them to the broad spectrum of
