provides sources of support from both the doctor's and patient's viewpoints. Included are improved surgical procedures, noninvasive techniques for surveillance of left ventricular function, guidelines for the timing of surgery, and the role of drug therapy in the management of valvular heart disease. This book is an invaluable resource for anyone coping with the physical and emotional turmoil of this disease. **Heart Valve Disease** Jose Zamorano, Patrizio Lancellotti, Luc Pierard, Philippe Pibarot, 2019-11-12. This book provides a state-of-the-art description of the pathophysiology, diagnosis, and management of valvular heart disease (VHD). With an aging population, the incidence and complexity of VHD has markedly increased, and the introduction of transcatheter valve therapies has revolutionized the management of these frequent and serious cardiovascular diseases. The development of percutaneous valve interventions has revolutionized the management of VHD or has dramatically changed its management. **Heart Valve Disease: State of the Art** is dedicated to provide up-to-date knowledge to clinical and interventional cardiologists, cardiovascular imagers, and cardiac surgeons. It provides state-of-the-art information for the health care professional working in heart valve clinics, heart teams, and centers of excellence that specialize in managing patients with heart valve disease. **Valvular Heart Disease in Clinical Practice** Michael Y. Henein, 2010-02-25. Over the last three decades, major advances in the management of diseases of the valves have been seen. While cardiac catheterization was in the 1970s the only means for confirming the diagnosis, Doppler echocardiography has become the corner stone for accurate assessment of valve disease, even in fetuses. Now not only the disease can be identified, but also the rate of disease progression, e.g., leaflet calcification and stiffness, can be accurately measured and quantified by echocardiography and multislice electron beam CT imaging. Surgical treatment of valve disease has also witnessed great advances, having moved from traditional valve replacement to sophisticated repair procedures and the use of extracorporeal pump support in some patients. Robotic valve surgery has also proved a great success in well-selected cases and is expected to have a fruitful future. Furthermore, in special circumstances, conventional surgical valve excision has now been replaced by percutaneous catheter-based valve replacement for aortic and pulmonary disease. This approach reduces the risk from the surgery itself, avoids general anesthesia, and many potential post-operative complications. This book discusses the practicalities of the diagnosis and treatment of the various aspects of common heart valve diseases, covering most clinical and surgical issues. It is designed to assist clinicians in the management of patients with valve disease and provide them with answers to many of the clinical questions that arise. **Valvular Heart Disease** Bruce W. Andrus, John C. Baldwin, 2006-03-13. The study of valvular heart disease has progressed rapidly over the past two decades. The understanding of etiology and natural history, the precision of noninvasive assessment, and the surgical and interventional management of valve disease have all improved dramatically. Coupled with an appreciation of physiologic principles, thoughtful interviews, and physical exam, current technology allows clinicians to characterize all types of valve lesion. In addition, evolving techniques in interventional cardiology and cardiac surgery, guided by quantitative outcome analysis, have reduced the

morbidity and mortality of these procedures Reflecting all the above and evidence based medical practice the authors aim to provide a concise and straightforward guide to the recognition and management of valvular heart disease complemented by current guidelines and abundant high quality images It will be a valuable reference for all involved in the care of patients with valvular heart disease including cardiologists in practice and training young hospital doctors general physicians cardiac nurse specialists and medical students
