Variability and Motor Control Karl M. Newell,1993 Variability and Motor Control is a comprehensive examination of research and theoretical perspectives on movement variability and motor control The text reviews traditional perspectives which view movement variability as noise or error and moves on to consider dynamical systems approaches to movement control which view variability as an index of movement fluctuations Written by leading experts in motor control this text provides valuable information on the importance of variability in the theoretical inquiry into motor control skill acquisition and motor impairment the use of estimated variability as a movement parameter in empirical studies of motor control and current developments of new dynamical systems approaches to variability and motor control Variability and Motor Control is a valuable reference for students and scholars of motor control and learning as well as experimental psychologists ergonomists and industrial and human factors specialists BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved

Neural Control of Speech Frank H. Guenther,2016-07-15 A comprehensive and unified account of the neural computations underlying speech production offering a theoretical framework bridging the behavioral and the neurological literatures In this book Frank Guenther offers a comprehensive unified account of the neural computations underlying speech production with an emphasis on speech motor control rather than linguistic content Guenther focuses on the brain mechanisms responsible for commanding the musculature of the vocal tract to produce articulations that result in an acoustic signal conveying a desired

string of syllables Guenther provides neuroanatomical and neurophysiological descriptions of the primary brain structures involved in speech production looking particularly at the cerebral cortex and its interactions with the cerebellum and basal ganglia using basic concepts of control theory accompanied by nontechnical explanations to explore the computations performed by these brain regions Guenther offers a detailed theoretical framework to account for a broad range of both behavioral and neurological data on the production of speech He discusses such topics as the goals of the neural controller of speech neural mechanisms involved in producing both short and long utterances and disorders of the speech system including apraxia of speech and stuttering Offering a bridge between the neurological and behavioral literatures on speech production the book will be a valuable resource for researchers in both fields
