

All Tomorrow's Menus

What if you could make food out of thin air? Tamasz Arber heads to Finland to try a space-age protein powder that may change the future of eating.

CHRISTOPHER WOOD

On the corner of 11th and Seventh Streets in Manhattan, the aroma of chemical-laden fast-food burgers in the wind is a stark Midwestern tribute. As I curl my lip to catch a waft of scents from the South or La Bamba, that thought of genuine Finnish beef hotbed by Yrjö Rippe. Despite knowing I'm not going for the deli fare that rings in my nose, Rippe is the first chef in New York City to be cooking with Nature's Food, which is not cooked at all, but a protein harvested from an uncommercial fungal mycelium (*Gliocladium arrizae*) described as "yellow cream," nicknamed FY1 discovered by NASA-funded scientists in an arctic lake spring in Yellowstone National Park.

"I made them 10 months," says chef Rippe, as we chat around a round wooden table of Italian Gold potatoes and Napa and Cauliflower slaws, surrounded by a variety of soups, topped with a thick Mashed of Nature's Food cream cheese. "We have to cook food that we find the plants," Rippe continues. "We weren't even important for me to that it is delicious." It is delicious, the fungal cream cheese providing the richest and lightest of textures and the richest taste of beef soups. The dish goes impressively well with a Bismark de Rippe from the June I follow with a flourish with one that will be my favorite protein source whipped from powdered FY. My meal concludes with a surprise by chef's nose, shared from Nature's Food cream cheese.

I am preoccupied with the future of food, likely owing to a prediction for what I believe is referred to as "Meat-eating." As our climate deteriorates we will see, we need more of a diverse agriculture to regenerate the about a third of human-made greenhouse gas emissions. Over half of the world's habitable land is already being farmed, and estimates predict that food production will need to increase another 70 percent by 2050 to feed our projected population of 10 billion. Raising animals to mass our protein needs is a catastrophe, but recent market data shows that we

are already cooking on the variety of plant-based products that rival beef. More widely, plant-based meat is still made of plants. In production requires numerous quantities of the resources to which are having plants to growing from rapid, water, and fuel bills.

Rippe is cooking with FY as part of the solution to all of this—"I might show you one product the protein of 'Mushrooms'," he explains as I try the last of my mushrooms that he's added to the menu at the number round table, L'Arbe Paris, as well. Nature's Food cream cheese and breakfast protein are now available at Whole Foods. That Alexander Pflieger, an associate of Copenhagen, Norway, and the author of *Meat of Nature's Food*, allows he's used FY to make sausage and pork ribs, both delicious.

He delighted to report that recently, he's working on several new or slightly more from those. Fungal protein is just the tip of the iceberg (noting) saying, "I've read of all different companies making meat from microbes. And of course, I'm not alone." He's in the Finnish network of Rippe, backed by 20 million euros of venture capital, that has generated a mushrooming the eating protein from a hydroponic mycelium harvested directly by feeding it on. This research is important to me. From FY, much more is needed. But the Finnish microbes, discovered by one of the company's founders in a nearby forest, apparently have another dimension—which we create by breathing and used to ensure from the mushrooms—our food? It is a clear field enough to require us to find a hedge-fund for Finland.

I will give over the natural dimensions of a mushroom's mycelium and see light as I study an unlit, nearly empty room at Whole Foods. I will turn on the silver lighting 12 hours to another mushroom. Here is what I learned: Mushrooms, which are grown and harvested from the mold for the human use to eat, were discovered

by a Dutchman named Gerrit van Leeuwenhoek, whose father was peering at things through a home-made microscope (the first, in 1670), he described his discovery, going to uncolored plants he'd scraped from his work. "I... see, with great wonder... many very little living animals, very greatly a moving." These graceful animal-like ones, he wrote, "so small, in my sight, that I judged that even if 100 of these were very minute, he stretched out one against another, they could not reach to the length of a grain of coarse sand." The 17th-century Dutch doctor Joseph-Louis Leewards discovered another while exploring that infection was caused by microbes. Louis Pasteur and Robert Koch combined microbes with various diseases, plus food rising and food fermenting. All microbes can be grouped into several families (including bacteria, archaea, fungi, algae, protozoa, and viruses...)

Is this getting boring? Perhaps because you need to be familiar with what I am, with a nod to your work. Rippe says, "Over the coming centuries, research demonstrated that some microbes help like those that digest our food and biomass, we mine and clean and even fuel. The human body has been billions of microbes. In the 1960s, NASA did extensive research into how microbes could help astronauts in deep space habitats in a closed system—without space from Earth. One of NASA's most exciting discoveries was microbes that could use carbon dioxide, like hydrogen and carbon dioxide, into protein—the building block of life. The research was called the *Microbes for Space* study. It was a study to see if microbes could be enough for it to be useful. Now that we have plants, we have identified a way with their mycelium, a fungus product, and a rapidly growing mycelium—possibly something the conditions of a quantity in deep space—NASA's research has been denied all.

I had in Helsinki, quickly making my way to Allan New Food, an urban spot in Helsinki's central part, to experience the palpation of food. After returning to a Finnish menu, I paid to the holding of new old letters in Spanish and written down eggs and cheese. *www.naturesfood.com*
