Small Format Television:

Television Jeremy G. Butler, 2012-02-20 For nearly two decades *Television Critical Methods and Applications* has served as the foremost guide to television studies. Designed for the television studies course in communication and media studies curricula, *Television* explains in depth how television programs and commercials are made and how they function as producers of meaning. Author Jeremy G. Butler shows the ways in which camera style, lighting, set design, editing, and sound combine to produce meanings that viewers take away from their television experience. He supplies students with a whole toolbox of implements to disassemble television and read between the lines, teaching them to incorporate critical thinking into their own television viewing. The fourth edition builds upon the pedagogy of previous editions to best accommodate current modes of understanding and teaching television. Highlights of the fourth edition include a new chapter and part organization to reflect the current approach to teaching television with greatly expanded methods and theories, chapters on an entirely new chapter on modes of production and their impact on what you see on the screen, discussions integrated throughout on the latest developments in television, such as convergence with other media such as material on transmedia storytelling and YouTube's impact on video distribution. Over three hundred printed illustrations, including new and better quality frame grabs of recent television shows and commercials, a companion website featuring color frame grabs, a glossary, flash cards, and editing and sound exercises for students, as well as PowerPoint presentations, sample syllabi, and other materials for instructors. Links to online videos that support examples in the text are also provided. With its distinctive approach to examining television, *Television* is appropriate for courses in television studies, media criticism, and general critical studies.

Perspectives on Radio and Television F. Leslie Smith, David H. Ostroff, John W. Wright, 2023-05-31 This textbook describes the field of radio and television in the United States, presents the material in a manner the reader can grasp and enjoy, and makes the book useful for the classroom teacher. Written for adaptation to individual teaching situations, the book is divided by subject matter into logical chapter divisions that can be assigned in the order appropriate for specific course students. Each chapter stands by itself, but the book is also an integrated whole. It is easy to understand at first reading, by beginning radio television majors or nonmajor elective students alike. To give readers a complete picture of the field, subjects such as ethics, careers, and rivals to U.S. commercial radio and television are included.

TV & Video Engineer's Reference Book K. G. Jackson, G. B. Townsend, 2014-05-15 TV broadcast transmission, radio frequency propagation, electron optics in cathode ray tube color encoding and decoding systems, television transmitters, and remote supervision of unattended transmitters. The definition and description of diagnostics in computer-controlled equipment are fully covered. In-depth accounts of the microwave radio relay systems are provided. The general characteristics of studio lighting and control are completely presented. A chapter is devoted to video tape recording. Another section focuses on the mixers and special effects generators. The book can provide useful information to technicians, engineers, students, and researchers.
