Medical Robotics Vanja Bozovic,2008-01-01 The first generation of surgical robots are already being installed in a number of operating rooms around the world Robotics is being introduced to medicine because it allows for unprecedented control and precision of surgical instruments in minimally invasive procedures So far robots have been used to position an endoscope perform gallbladder surgery and correct gastroesophageal reflux and heartburn The ultimate goal of the robotic surgery field is to design a robot that can be used to perform closed chest beating heart surgery The use of robotics in surgery will expand over the next decades without any doubt Minimally Invasive Surgery MIS is a revolutionary approach in surgery In MIS the operation is performed with instruments and viewing equipment inserted into the body through small incisions created by the surgeon in contrast to open surgery with large incisions This minimizes surgical trauma and damage to healthy tissue resulting in shorter patient recovery time The aim of this book is to provide an overview of the state of art to present new ideas original results and practical experiences in this expanding area Nevertheless many chapters in the book concern advanced research on this growing area The book provides critical analysis of clinical trials assessment of the benefits and risks of the application of these technologies This book is certainly a small sample of the research activity on Medical Robotics going on around the globe as you read it but it surely covers a good deal of what has been done in the field recently and as such it works as a valuable source for researchers interested in the involved subjects whether they are currently medical roboticists or not
