Krause, 1986 [Modern Geometries](#) James R. Smart, 1998 This comprehensive best selling text focuses on the study of many different geometries rather than a single geometry and is thoroughly modern in its approach Each chapter is essentially a short course on one aspect of modern geometry including finite geometries the geometry of transformations convexity advanced Euclidian geometry inversion projective geometry geometric aspects of topology and non Euclidean geometries This edition reflects the recommendations of the COMAP proceedings on Geometry's Future the NCTM standards and the Professional Standards for Teaching Mathematics References to a new companion text Active Geometry by David A Thomas encourage students to explore the geometry of motion through the use of computer software Using Active Geometry at the beginning of various sections allows professors to give students a somewhat more intuitive introduction using current technology before moving on to more abstract concepts and theorems **Cab Art Chronicles**, 1981 *Euclidean and Non-Euclidean Geometries* Marvin J.
