CATHERINE  
ROBERTS

Lewis Mumford has said of this book:

"The special value of Dr. Roberts' criticisms of science comes from the fact that she became aware of its inadequacies as a method and a world-view while in the midst of a successful career as a scientist. She is not against science itself when under rational direction and moral control—that goes without saying—but against a method and a philosophy that loses out important human values. Her work, therefore, is part of a broadening stream of criticism from within science, represented by people as eminent as Michael Polanyi, Soren Gyng and Rosalind Dukes."

**Consciousness as a Scientific Concept** Elizabeth Irvine, 2012-10-13 The source of endless speculation and public curiosity our scientific quest for the origins of human consciousness has expanded along with the technical capabilities of science itself and remains one of the key topics able to fire public as much as academic interest Yet many problematic issues identified in this important new book remain unresolved Focusing on a series of methodological difficulties swirling around consciousness research the contributors to this volume suggest that consciousness is in fact not a wholly viable scientific concept Supporting this eliminativist stance are assessments of the current theories and methods of consciousness science in their own terms as well as applications of good scientific practice criteria from the philosophy of science For example the work identifies the central problem of the misuse of qualitative difference and dissociation paradigms often deployed to identify measures of consciousness It also examines the difficulties that attend the wide range of experimental protocols used to operationalise consciousness and the implications this has on the findings of integrative approaches across behavioural and neurophysiological research The work also explores the significant mismatch between the common intuitions about the content of consciousness that motivate much of the current science and the actual properties of the neural processes underlying sensory and cognitive phenomena Even as it makes the negative eliminativist case the strong empirical grounding in this volume also allows positive characterisations to be made about the products of the current science of consciousness facilitating a re identification of target phenomena and valid research questions for the mind sciences *Consciousness* ,

*Consciousness and the Brain* Gordon Globus,2012-12-06 The relationship of consciousness to brain which Schopenhauer grandly referred to as the world knot remains an unsolved problem within both philosophy and science The central focus in what follows is the relevance of science from psychoanalysis to neurophysiology and quantum physics to the mind brain

puzzle Many would argue that we have advanced little since the age of the Greek philosophers and that the extraordinary accumulation of neuroscientific knowledge in this century has helped not at all Increasingly philosophers and scientists have tended to go their separate ways in considering the issues since they tend to differ in the questions that they ask the data and ideas which are provided for consideration their methods for answering these questions and criteria for judging the acceptability of an answer But it is our conviction that philosophers and scientists can usefully interchange at least to the extent that they provide constraints upon each other's preferred strategies and it may prove possible for more substantive progress to be made Philosophers have said some rather naive things by ignoring the extraordinary advances in the neurosciences in the twentieth century The skull is not filled with green cheese On the other hand the arrogance of many scientists toward philosophy and their faith in the scientific method is equally naive Scientists clearly have much to learn from philosophy as an intellectual discipline Science, 1926 **Some Chapters on Judaism and the Science of Religion** Louis Grossmann, 1889
