**The Data of Philosophy** Herbert Spencer, 2005-12-01 This scarce antiquarian book is a facsimile reprint of the original. Because we believe this work is culturally important, we have made it available as part of our commitment for protecting, preserving and promoting the world's literature in affordable, high-quality, modern editions that are true to the original work. *The Principles of Ethics: The data of ethics; The inductions of ethics; The ethics of individual life* Herbert Spencer, 1893 [The Journal of Philosophy](#), 1926 Covers topics in philosophy, psychology, and scientific methods. Vols 31 include A Bibliography of philosophy, 1933 [The Journal of Philosophy, Psychology, and Scientific Methods](#) Frederick James Eugene Woodbridge, Wendell T. Bush, 1919 **The Journal of Philosophy, Psychology and Scientific Methods**, 1919 **Philosophy's Future** Russell Blackford, Damien Broderick, 2017-04-25 Philosophy's Future: The Problem of Philosophical Progress diagnoses the state of philosophy as an academic discipline and calls it to account, inviting further reflection and dialogue on its cultural value and capacity for future evolution. Offers the most up-to-date treatment of the intellectual and cultural value of contemporary philosophy from a wide range of perspectives. Features contributions from distinguished philosophers such as Frank Jackson, Karen Green, Timothy Williamson, Jessica Wilson, and many others. Explores the ways philosophical investigations of logic, world, mind, and moral responsibility continue to shape the empirical and theoretical sciences. Considers the role of contemporary philosophy in political issues such as women's rights, the discrimination of minorities, and public health. *A Course in Philosophy* George Perrigo Conger, 1924 **Proceedings of the ... Convocation** University of the State of New York, 1929 **The Religion of Philosophy** Raymond St. James Perrin, 1885 It is well known that religion, as well as philosophy, depends upon language for the expression of its truths. This seems a simple proposition, but what are its consequences? If language is the sole medium of development of the higher thoughts and feelings, in its genesis may we not hope to discover the deepest truths of life and mind? Before the complex symbols which we call words came into use, and hence before the mind acquired the faculty of forming thoughts or extended comparisons, activities or motions were the only medium of expression between sentient beings. Language is the development of these expressive actions, and so highly complex has it become so far removed from its rude beginnings that it seems another order of creation, a system of miraculous origin. But when we remember that intelligence is a concomitant development with language, that thought or spirit is but a building up of words into ideas, and that these words are merely condensed memories of common experiences which have become current from tongue to tongue, is it not evident that there is no impenetrable mystery in speech, and that its product, mind, is a synthesis of simple and familiar truths? Again, when we retrace sensibility or feeling from which language has been gradually evolved to its beginnings in organic life, we find no absolute demarcations; we find that all life, whether mental or physical, is interdependent.
