

WHAT IS GEOGRAPHY?

Geography is the study of places and the relationships between people and their environments.

A **geographer** is a physical scientist, social scientist or humanist whose area of study is geography. They explore the physical properties of Earth and the human behaviour across it.

There are **three types of geography**: physical geography (*the effects it has on people and the environment*), human geography (*concerned with people*) and environmental geography (*how people behaviour can affect the environment*).

The Geography Of Science:

The Geography of Science Harold Dorn, 1991 *Putting Science in Its Place* David N. Livingstone, 2010-04-15 We are accustomed to thinking of science and its findings as universal After all one atom of carbon plus two of oxygen yields carbon dioxide in Amazonia as well as in Alaska a scientist in Bombay can use the same materials and techniques to challenge the work of a scientist in New York and of course the laws of gravity apply worldwide Why then should the spaces where science is done matter at all David N Livingstone here puts that question to the test with his fascinating study of how science bears the marks of its place of production Putting Science in Its Place establishes the fundamental importance of geography in both the generation and the consumption of scientific knowledge using historical examples of the many places where science has been practiced Livingstone first turns his attention to some of the specific sites where science has been made the laboratory museum and botanical garden to name some of the more conventional locales but also places like the coffeehouse and cathedral ship s deck and asylum even the human body itself In each case he reveals just how the space of inquiry has conditioned the investigations carried out there He then describes how on a regional scale provincial cultures have shaped scientific endeavor and how in turn scientific practices have been instrumental in forming local identities Widening his inquiry Livingstone points gently to the fundamental instability of scientific meaning based on case studies of how scientific theories have been received in different locales Putting Science in Its Place powerfully concludes by examining the remarkable mobility of science and the seemingly effortless way it moves around the globe From the reception of Darwin in the land of the Maori to the giraffe that walked from Marseilles to Paris Livingstone shows that place does matter even in the world of science

Fostering Transformative Research in the Geographical Sciences National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Geographical Sciences Committee, Committee on Identifying Transformative Research in the Geographical Sciences, 2019-04-22 The central purpose of all research is to create new knowledge In the geographical sciences this is driven by a desire to create new knowledge about the relations between space place and the anthropogenic and non anthropogenic features and processes of the Earth But some research goes beyond these modest aims and creates new opportunities for further research or affects the process of knowledge acquisition more broadly or changes the way other researchers in a domain think about the world and go about their business Due to its positive impacts transformative research can be regarded as inherently having greater value than more conventional research and funding agencies clearly regard transformative research as something to be encouraged and funded through special programs Assessments of transformative research funding initiatives are few and provide a mixed picture of their effectiveness The challenge is whether transformative research can be identified at the time it is proposed rather than after it has been conducted communicated and its influence on the discipline has become clear Fostering Transformative Research in the Geographical Sciences reviews how transformative research has emerged in the past what its

early markers were and makes recommendations for how it can be nurtured in the future The Science of Geography National Research Council (U.S.). Ad Hoc Committee on Geography, 1965 *The Art And Science Of Geography* Vladimir V. Annenkov, George J Demko, 2019-07-11 Responding to the changes taking place in the post Cold War era the editors of this volume have brought together more than forty distinguished Soviet and U S geographers to redefine geography as a discipline and to examine its relationship to other sciences and to the arts Challenging inevitable barriers of language and of differing social cultural and scientific backgrounds each contributor provides personal insight and perspective shedding unique light onto this often poorly understood discipline The book covers a broad sweep of issues ranging from the methods of geography to examples of practical work done by geographers in Russia and the former republics and the United States The contributors explore and define advances in quantitative technique increasingly sophisticated methodology and the essential relationship between these changes and theory building They also examine the application of geography in Soviet and U S schools as well as the demands that shifting world events are placing on the discipline The discussions not only reveal the individual perspectives of each geographer but also provide a unique forum for the exploration of similarities and differences within the world s two largest geographic communities The volume concludes with an afterword by Torsten Hagerstrand
