Sustainability in Project Management Anna Brzozowska, Arnold Pabian, Barbara Pabian, 2021-04-01 This book presents a new approach to the issue of project management showing how it can be approached through the lens of sustainability The nature of sustainable project management is not only to achieve economic goals but also environmental and social ones Considering project management from the perspective of sustainability is very important because sustainable development cannot keep up with the pace and scale of accumulation of ecological and social problems The natural potential of the Earth is quickly running low The global equilibrium between the Earth's ecosystems which have developed for millions of years and the human world of production and consumption becomes disrupted The focus is on a functional approach to the subject allowing management and business to implement the methodology discussed Topics discussed include sustainable planning sustainable organizing sustainable leading and sustainable controlling The authors use their combined experience in the area to inform their novel approach The book will be especially useful for people who are project managers members of project teams and other project stakeholders It may also be a useful reference for scientists and students studying the fields of management IT and business

management is no longer an idealistic ambition of a small group of caring individuals. It is a reality and a necessity for all project professionals operating in today's business environment in which economic performance needs to go together with performance on environmental, social, and governance (ESG) criteria. Sustainable project management is the new normal in project management in which the concepts of sustainability and social responsibility are integrated into the practices of project management. IPMA's Sustainable Project Management ICB4 Reference Guide set the standard for this and described 92 sustainability-related key competence indicators that complement IPMA's Individual Competence Baseline 4. This book provides the knowledge and understanding of sustainable project management that project professionals require to prepare themselves for an IPMA certification based on the Sustainable Project Management ICB4 Reference Guide. With this certification, a project professional is well positioned to lead projects in today's business world. Sustainable project management represents a scope paradigm and mind shift in project management. The IPMA Guide on Sustainable Project Management is written by an international team of experts in project management and sustainability who aim to provide inspiration and practical guidance for project professionals on the consideration and integration of sustainability and responsibility into their daily profession. Sustainability is the goal we all share, and sustainable project management is the contribution the project professional can make.

The Integration of Project Management, Quality and Sustainable Design to Achieve Sustainable Project Outcomes in New Zealand Commercial Building Projects Jody Carlson, 2017

Since the early 1980s, the concept of sustainability and sustainable development has been evolving and solidifying its relevance on a worldwide scale. Within the building industry, the new millennium marked a substantial period with a shift in the way of thinking on the topic of sustainability and sustainable design, which resulted in a rise in green building projects. These sustainable development projects recognised an opportunity to reduce environmental impacts and energy consumption, cut construction and operational costs, and provide better quality built environments. Movement on the concept of green building and sustainable practices has significantly slowed in more recent times, with the limited influential progression flowing through from these early ways of thinking, having been linked to a growing understanding that a continual undertaking of a singular green building at a time is insufficient to coerce change across society, and in the common practice ways of thinking. Current literature and trade discussions most widely recognise that to achieve the required shift within the building industry and construction sector, several practices and principles need to come into alignment between sustainability, sustainable development, and construction project management. These standing studies highlight that although the responsibility for sustainability will differ across any given selection of projects, the role of the project manager is always influential. Therefore, meaning that project managers and the project management profession should take more responsibility for creating a sustainable future. To achieve this, however, it is widely understood that the specific expertise of project managers will need to evolve to enable practical implementation of the concepts involved with sustainability. This existing research and literature

includes thorough investigation into the obstacles which arise when the traditional systems and principles for construction project management are applied to the modern specifications called for in sustainable development and sustainable design projects Through advancing on these conclusions this new research thesis explores how the individual project manager and the project management profession can begin to bridge the gap between traditional project outcomes and the ever developing requirements for built sustainable design project outcomes within the New Zealand commercial building construction industry In doing so the author endeavours to understand how the integration of sustainable development with the quality sector of the Iron Triangle can be driven by the project management profession to influence the production and delivery of sustainable built environments in New Zealand Considerations will include the current market position within the New Zealand construction industry together with examination into why these two concepts are currently divergent and whether government legislation is helping or hindering a shift toward a more sustainable construction industry **Towards**
