Leo M.L. Nollet, Javed Ahmad, 2022-12-02 Natural toxins are toxic compounds that are naturally produced by living organisms These toxins are not harmful to the organisms themselves but they may be toxic to other creatures including humans when eaten These chemical compounds have diverse structures and differ in biological function and toxicity Some toxins are produced by plants as a natural defense mechanism against predators insects or microorganisms or as a consequence of infestation with microorganisms such as mold in response to climate stress such as drought or extreme humidity Well known groups of natural toxins of plant origin are cyanogenic glycosides pyrrolizidine alkaloids furocoumarins lectins and glycoalkaloids These plant origin natural toxins can cause a variety of adverse health effects and pose a serious health threat to both humans and livestock Analysis of Naturally Occurring Food Toxins of Plant Origin is divided into three sections that provide a detailed overview of different classes of food toxins that are naturally found in plants including various analytical techniques used for their structural characterization identification detection and quantification This book provides in depth information and comprehensive discussion over quantitative and qualitative analysis of natural toxins in

plant based foods Key Features Provides a detailed overview of different classes of natural toxins found in plants Explains how IR NMR and mass spectrometry are utilized in characterization and identification Describes applicability of HPLC LC MS GC MS and HPTLC techniques for detection and quantification Discusses progress in the field related to capillary electrophoresis ELISA and biosensors for quantitative application of these techniques Also available in the Food Analysis and Properties Series Nutriomics Well being through Nutrition edited by Devarajan Thangadurai Saher Islam Leo M L Nollet Juliana Bunmi Adetunji ISBN 9780367695415 Bioactive Peptides from Food Sources Analysis and Functions edited by Leo M L Nollet and Semih tle ISBN 9780367608538 Mass Spectrometry in Food Analysis edited by Leo M L Nollet and Robert Winkler ISBN 9780367548797 For a complete list of books in this series please visit our website at www.crcpress.com Food Analysis Properties book series CRCFOODANPRO

Examples are glycoalkaloids in potatoes cyanogenic glucosides in cassava or phytohemagglutinin in red kidney beans They have all been causally associated with acute human toxicity when ingested through foods that were not properly processed or prepared Both toxicological and exposure data are limited for most inherent plant toxicants Therefore accurate risk assessment is often not possible For many inherent toxicants the margin of exposure between toxic levels in humans and actual exposure from food is low Therefore risk management measures need to be implemented in order to ensure food safety Management options include development of cultivars low in inherent toxicants agricultural and storage practices and food processing Further work is necessary to better characterize the potential health impact of inherent plant toxicants This should include the development of a risk assessment paradigm which considers both potential adverse but also beneficial effects of secondary plant metabolites and of the pertinent food plants as such
