## **Vacuum Ultraviolet Radiation Physics:**

Some Aspects of Vacuum Ultraviolet Radiation Physics Nicole Damany, Jacques Romand, Boris Vodar, 2013-10-22 Some Aspects of Vacuum Ultraviolet Radiation Physics presents some data on the state of research in vacuum ultraviolet radiation in association with areas of physics Organized into four parts this book begins by elucidating the optical properties of solids in the vacuum ultraviolet region  $v u v$  particularly the specific methods of determination of optical constants in  $v u v$  the properties of metals and those of ionic insulators Part II deals with molecular spectroscopy with emphasis on the spectra of diatomic and simple polyatomic molecules paraffins and condensed phases Part III focuses on some aspects of emission spectroscopy in the  $v u v$  in relation to laboratory plasmas The last part describes the image formation by concave gratings spectrophotometry and diffusion by surfaces This book will be very valuable to physicist and graduate students inclined to this field of interest *Some Aspects of Vacuum Ultraviolet Radiation Physics* Nicole Damany, 1974 **Some aspects of vacuum ultraviolet radiation physics** Nicole Damany, Jacques Romand, Boris Vodar, 1974-12-31 No detailed description available for Some aspects of vacuum ultraviolet radiation physics *Extended Abstracts* International Conference on Vacuum Ultraviolet Radiation Physics, M. Ishii, 2012-12-02 These volumes contain 365 of the 505 papers presented at the VUV 11 Conference held at Rikkyo University Tokyo from August 27th to September 1st 1995 The papers are divided into three sections atomic and molecular spectroscopy solid state spectroscopy and instrumentation and technological applications New aspects presented were both quantitative and qualitative improvements in fluorescence spectroscopy and magnetic circular dichroism measurements The fluorescence data are complementary to those of photoemission in a sense but they appear to open up a new method to analyze the optical excitation and relaxation processes The application of magnetic circular dichroism has proved to be useful not only in analyzing the electronic structures of magnetic materials but also in practical applications to material engineering as found in experiments combined with photoelectron microscopy Excellent developments in applications are only found in the field of surface photochemistry where

the technique of etching using VUV light has been appreciably refined Although the majority of distinctive scientific features in the VUV 11 Conference have been brought about by the application of synchrotron radiation experiments using a different type of light source appear to have progressed steadily This is evident in the studies of plasma radiation
