**Advancing Accessibility Through Software Development for Disability and Neurodivergence** Álvarez Robles, Teresita de Jesús, León, Mónica Adriana Carreño, Montané Baños, Samuel, Álvarez Rodríguez, Francisco Javier, Sandoval Bringas, Jesús Andrés, 2026-01-14 Advancing accessibility in software development is not only a technical challenge but also a commitment to equity dignity and inclusion Examining thoughtful designs and a deep understanding of diverse user experiences can transform digital spaces into environments where everyone can participate fully By bridging human centered design with modern engineering practices developers can create technology that truly serves all users including those with disabilities and neurodivergent needs Advancing Accessibility Through Software Development for Disability and Neurodivergence expands upon the different techniques of inclusive software

development This book showcases emerging technologies and development methodologies designed to address the specific needs of individuals with disabilities and those who are neurodivergent Covering topics such as software development disabilities and neurodivergence this book is an excellent resource for researchers academicians software developers graduate students and more [Human-Centred Design of Socially Interactive Virtual Agents](#) Emma Mainza Chilufya,2025-02-24 The thesis is within the field of cognitive science set within the domains of situated cognition and mediated action with a focus on mediation in Human Computer Interaction HCI It discusses cognition in relation to users Intelligent Virtual Agents IVAs and the interaction environment The perspectives and actions of users humans significantly influence the course of the interaction IVAs as mediators facilitate interactions between users and their environments As agents they actively engage with users influencing their decisions and behaviours User involvement in the design process is important for the design of interactive systems When properly implemented using the correct methods principles and techniques can lead to the development of systems that are effective efficient and satisfying to use IVA research has shown a lack of user participation methodologies in the design process The design of IVAs often focuses on individual elements and not the IVA as an integrated whole As a result these design insights do not easily convert into actionable guidelines User involvement is primarily seen during the evaluation phase This leads to the purpose of looking at the design of interactive interfaces of embodied agents virtual and physical set in social interactive spaces by involving the users in the conceptual generation and prototyping phase The research questions are How can we design interactive virtual agents for social interactive spaces and How can we apply human centred design methods to develop interactive virtual agents for social interactive spaces Two case studies a virtual receptionist for a university department and a reading robot BookBot for fourth grade pupils are conducted Each case study involved a concept generation and prototyping phase with the users using human centred design HCD methods and tools Prototypes were developed based on the conceptual phase findings and evaluated with the users One key contribution is the application of HCD methodologies in the design of IVAs within social interactive spaces This includes considerations of the context of interaction mediation patterns and the spaces of interaction Another contribution is the introduction of novel design approaches solution features and competencies that designers should have when designing IVAs in social interactive spaces The thesis presents exemplars of IVAs in these spaces

emotional or behavioral change Games take various formats from board games to informatics to games with interactive rules of play Similarly computer tools may vary widely in format from self help or assisted computerized training to virtual reality or applications for smartphones Some tools that may be helpful for mental health were specifically designed for that goal whereas others were not Gamification of computer related products and games with a numeric format tend to reduce the gap between games and computers tools and increase the conceptual synergy in such fields Games and computer design share an opportunity for creativity and innovation to help create specifically design and assess preventive or therapeutic tools Computers and games share a design conception that allows innovative approaches to overcome barriers of the real world by creating their own rules Yet despite the potential interest in such tools to improve treatment of mental disorders and to help prevent them the field remains understudied and information is under disseminated in clinical practice Some studies have shown however that there is potential interest and acceptability of tools that support various vehicles rationales objectives and formats These tools include traditional games e g chess games popular electronic games board games computer based interventions specifically designed for psychotherapy or cognitive training virtual reality apps for smartphones and so forth Computers and games may offer a true opportunity to develop assess and disseminate new prevention and treatment tools for mental health and well being Currently there is a strong need for state of the art information to answer questions such as the following Why develop such tools for mental health and well being What are the potential additions to traditional treatments What are the best strategies or formats to improve the possible impact of these tools Are such tools useful as a first treatment step What is the potential of a hybrid model of care that combines traditional approaches with games and or computers as tools What games and applications have already been designed and studied What is the evidence from previous studies How can such tools be successfully designed for mental health and well being What is rewarding or attractive for patients in using such treatments What are the worldwide developments in the field Are some protocols under development What are the barriers and challenges related to such developments How can these tools be assessed and how can the way that they work and for whom be measured Are the potential benefits of such products specific or can these additions be attributed to nonspecific factors What are the users views on such tools What are the possible links between such tools and social networks Is there a gap between evidence based results and market development Are there any quality challenges What future developments and studies are needed in the field
