What's so Great About Nothing? The Gnu General Public License and the Zero-Price-Fixing Problem Heidi S. Bond,2014 This Note argues that Section 2b of the GNU General Public License which requires that sublicenses be granted at no charge is a permissible price restraint The justification for this is nothing Or rather a price of nothing on future distributions should be distinguished from non zero prices Although the vast majority of price fixing is per se illegal the prohibition on price fixing arises out of two separate concerns about competition First antitrust law tries to protect consumers from higher prices fixed by cartels rather than by a competitive market Second antitrust law relies on market competition to produce higher quality products A price of

nothing in the context of the GPL addresses both these worries In short when it comes to the GPL something s great about nothing
