This year's symposium continues the tradition of being the premier forum for the presentation of research results and experience reports on leading edge issues of spatial and temporal databases systems including data models systems applications and theory. The mission of the symposium is to share innovative solutions that fulfill the needs of novel applications and heterogeneous environments and identify new directions for future research and development. SSTD 2005 gives researchers and practitioners a unique opportunity to share their perspectives with others interested in the various aspects of database systems for managing spatial and temporal data and for supporting their applications. A total of 77 papers were submitted this year from several countries. After a thorough review process the program committee accepted 24 papers covering a variety of topics including indexing techniques and query processing mobile environments and moving objects and spatial and temporal data streams. We are very pleased with the variety of the symposium's topics and we are proud of the resulting strong program.

The Golden Bough: The Magic Art and the Evolution of Kings. The King of the Wood James George Frazer, 1911. Frazer's series which attempted to define the shared elements of religious belief and scientific thought discussing fertility rites human sacrifice the dying god the scapegoat and many other symbols and practices whose influences had extended into 20th century culture. His thesis is that old religions were fertility cults that revolved around the worship and periodic sacrifice of a sacred king. Frazer proposed that mankind progresses from magic through religious belief to scientific thought.

Multi-UAS Minimum Time Search in Dynamic and Uncertain Environments Sara Pérez Carabaza, 2021-06-30. This book proposes some novel approaches for finding unmanned aerial vehicle trajectories to reach targets with unknown location in minimum time. At first it reviews probabilistic search algorithms that have been used for dealing with the minimum time search MTS problem and discusses how metaheuristics and in particular the ant colony optimization algorithm ACO can help to find high quality solutions with low computational time. Then it describes two ACO based approaches to solve the discrete MTS problem and the continuous MTS problem respectively. In turn it reports on the evaluation of the ACO based discrete and continuous approaches to the MTS problem in different simulated scenarios showing that the methods outperform in most all the cases over other state of the art approaches. In the last part of the thesis the work of integration of the proposed techniques in the ground control station developed by Airbus to control ATLANTE UAV is reported in detail providing practical insights into the implementation of these methods for real UAVs.
