Values And Planning:

Exploring Usage of the Word "values" Anne Maret Varangu, 2006 Explicitly and implicitly planners make choices about values and use values to make choices Values are presented as reasons to do and not to do in setting goals and during participatory planning processes cited in scholarly articles used as planning knowledge and purposefully collected by surveys Attention to values is generally focused on substantive and procedural dimensions such as determining what peoples values are or deciding which values are relevant in what circumstances and at what point in planning processes As well planners may have a particular interest in understanding why people take particular positions on values especially when values appear to conflict with values embedded in particular planning purposes and proposals Most of such usage of values takes the meaning of values for granted It begins with an assumption of shared understanding about what values are This thesis takes a step backwards to explore whether or not this assumption is warranted by identifying what appear to be different and disconnected usages of the word values The first part of the thesis considers the history of usage of the word values and objections to using values language before proposing a theory about diverse usage of values This theory was developed using grounded theory methodology an iterative method of constant comparison and contrast applied to thousands of examples of values usage Examples were gathered from contemporary everyday usage and from a broad range of scholarly material dating back to the late 1800s These examples included but were not limited to examples from planning Conclusions reached in the study of values are then used as a basis for developing three propositions that are applied to planning 1 Calling something a value instead of a belief principle attitude and so on can make a difference 2 Particular usages of values no matter how diverse are expressions of a concept of values in general and 3 A questioning attitude should be attached to all values usage by default For values to be a useful planning tool the propositions should have explanatory value and create new opportunities for analysis and understanding of values usage in planning That there are multiple ways of using values suggests that planners have a choice in deciding how to use values The third proposition is used as a starting point for proposing a usage of values that may be particularly suited to sustainability planning The proposed usage takes into consideration the implications of a theory about diverse usage and a flexible and vague concept of values in general the diverse history of usage of the word values objections to the use of values language diverse usage of values in planning in general and the needs of planning Sustainability planning appears to have a particularly desperate need for integrating values across sectors into which society and ideas about society are organized The usage of values proposed for sustainability planning is applied to a case study of a municipal sustainability initiative to consider its explanatory value and how a different understanding of values might have affected the planning process and subsequent implementation of the sustainability policy If this theory about values holds in application to planning then values may be a powerful tool with which to challenge convention and the status quo Conclusions are drawn about the desirability and feasibility of explicit and deliberate use of

the word and idea of values in planning and suggestions are made for further research Values and Planning Huw Thomas,2017-09-29 This book brings together a group of distinguished international authors to analyze and comment upon the various roles of evaluation and valued ideas in planning and education of planners Topics covered include the nature of aesthetic judgement and of practical judgement the implications for planning of various theories of environmental ethics and the significance of key concepts such as heritage justice professional ethics and the public interest in orienting planning practice Contributors relate their ideas about planning to a wide range of philosophical and social theories and debates including feminist writings discussions of post modernism critical theory and the work of Anglo American analytical philosophers These essays will prove stimulating not only to planning theorists and practitioners but to anyone interested in the way evaluations and key concepts contained in them can and should influence public policy *City Planning and Real Estate Values with Application to Chicago* Socrates Michael Karakiz,1928 **Values and Planning** Ronald M.
