The Essence of Multivariate Thinking Lisa L. Harlow,2014-02-18 By focusing on underlying themes this book helps readers better understand the connections between multivariate methods For each method the author highlights the similarities and differences between the methods when they are used and the questions they address the key assumptions and equations and how to interpret the results The concepts take center stage while formulas are kept to a minimum Examples using the same data set give readers continuity so they can more easily apply the concepts Each method is also accompanied by a worked out example SPSS and SAS input and an example of how to write up the results EQS code is used for the book's SEM applications This extensively revised edition features New SEM chapters including an introduction ch 10 path analysis ch 11 confirmatory factor analysis ch 12 and latent variable modeling ch 13 the last three with an EQS application A new chapter on multilevel modeling ch 8 that is now used more frequently in the social sciences More emphasis on significance tests effect sizes and confidence intervals to encourage readers to adopt a thorough approach to assessing the magnitude of their findings A new data set that explores the work environment More discussion about the basic assumptions and equations for each method for a more accessible approach New examples that help clarify the distinctions between methods A new website at <https://sites.google.com/site/multivariate2ndedition> that features the datasets for all of the examples in the book for use in both SPSS and SAS and in EQS for the SEM chapters The first two chapters review the core themes that run through most multivariate methods The author shows how understanding multivariate methods is much more achievable when we notice the themes that underlie these statistical techniques This multiple level approach also provides greater reliability and validity in our research After providing insight into the core themes the author illustrates them as they apply to the most popular multivariate methods used in the social and behavioral sciences First two intermediate methods are explored multiple regression and analysis of covariance Next the multivariate grouping variable methods of multivariate analysis of variance discriminant function analysis and logistic regression are explored Next the themes are applied to multivariate modeling methods including multilevel modeling path analysis

confirmatory factor analysis and latent variable models that include exploratory structural methods of principal component and factor analysis The book concludes with a summary of the common themes and how they pertain to each method discussed in this book Intended for advanced undergraduate and or graduate courses in multivariate statistics taught in psychology education human development business nursing and other social and life sciences researchers also appreciate this book s applied approach Knowledge of basic statistics research methods basic algebra and finite mathematics is recommended

Borovac,Aleksandra Gašević ,Dejan Milasinovic ,Dino Mirić,2026-02-13 Ischemic heart disease is the leading cause of disability and premature death worldwide Chronic coronary syndrome CCS previously known as stable angina is a progressive and chronic disease of the coronary arteries Its course can be significantly altered by lifestyle modifications conservative therapy pharmacotherapy and coronary revascularization These measures have a significant impact on the patient s journey in terms of symptoms quality of life and to a certain extent prognosis Furthermore these treatment strategies can ensure the long stable path of the disease even inducing its regression However a patient with CCS can be destabilized at any time usually by an acute atherothrombotic event Coronary revascularization can be offered to a patient through coronary artery bypass graft surgery CABG percutaneous coronary intervention PCI or sometimes a hybrid invasive approach While invasive strategies have proven profoundly effective in reducing mortality morbidity and symptoms in the setting of acute coronary syndrome their role in patients with CCS compared to conservative therapy is less clear In this patient population coronary revascularization is largely reserved for those with unacceptable and limiting angina despite conservative therapy significant left ventricular systolic dysfunction or high risk coronary anatomy This research topic aims to gather contributions from clinical and translational researchers worldwide on the challenges and advancements in diagnosing managing and risk stratifying patients with chronic coronary syndrome CCS The primary goals include identifying which CCS patients benefit most from revascularization determining criteria for revascularization in patients with severe left ventricular systolic dysfunction exploring factors influencing revascularization decisions assessing the impact of non cardiac comorbidities age and quality of life on decision making investigating the role of exercise tests and non invasive imaging in risk stratification and coronary disease detection evaluating the efficacy of anti ischemic antithrombotic and other drugs for CCS optimizing conservative medical therapy for individual patients addressing the challenges in diagnosing and treating patients with microvascular or vasospastic angina without obstructive epicardial coronary disease and enhancing understanding of CCS complexities in clinical practice through collaborative research and shared decision making To gather further insights into the complexities of CCS management we welcome articles addressing but not limited to the following themes Original studies in the field of CCS such as those dealing with the diagnosis and quantification of coronary disease burden using intravascular imaging methods like intravascular ultrasound IVUS or optical coherence tomography OCT and imaging guided PCI in CCS Papers focused on different management strategies in CCS particularly those reporting important outcome data such as mortality recurrent hospitalizations angina occurrence and quality of life Clinical studies investigating various devices in CCS such as coronary sinus reducers drug coated balloons third generation drug eluting stents calcium modification methods and similar

innovations Data derived from big data research in this setting including nationwide datasets or information from multicentric registries Manuscripts focused on the diagnosis and management of non obstructive CCS conditions such as microvascular and or vasospastic angina Manuscripts focused on the diagnosis and management of special and complex populations within the CCS spectrum such as patients with chronic total occlusion CTO Up to date state of the art review articles on relevant CCS topics with large uncertainties or high levels of debate Translational research papers on a case by case basis
