## **The New Cosmos:**

The New Cosmos Albrecht Unsöld, Bodo Baschek, 2001-09-04 This new edition of the classic textbook *The New Cosmos* presents a comprehensive introductory survey of the whole field of astronomy and astrophysics. Among the topics covered are Classical astronomy and the Solar System, Instruments and observational methods, The Sun and the stars, The Milky Way and other galaxies, Cosmology, The origin of the Solar System, The evolution of the Earth and of life. The observational methods and results of astronomical research as well as their theoretical foundations and interrelations are presented in an understandable format. The rapid progress of observational techniques and of theoretical understanding in the past decade are introduced and summarized in this timely and readable volume. This revised and extended new printing demonstrates the rapid advances in astronomical research and observation in the three years since the appearance of the 5th edition. The most important new results can be found within providing in particular up to date information on our solar system, neutrino radiation from the Sun, the farthest galaxies and quasars and the development of the Universe. **The New Cosmos**

Albrecht Unsöld, Bodo Baschek, 2014-03-12 Astronomy, astrophysics and space research have witnessed an explosive development over the last few decades. The new observational potential offered by space stations and the availability of powerful and highly specialized computers have revealed novel aspects of the fascinating realm of galaxies, quasars, stars and planets. The present completely revised 5th edition of *The New Cosmos* provides ample evidence of these dramatic developments. In a concise presentation which assumes only a modest prior knowledge of mathematics and physics, the book gives a coherent introduction to the entire field of astronomy and astrophysics. At the same time it takes into account the art of observation and the fundamental ideas behind their interpretation. Like its predecessors, this edition of *The New Cosmos* will provide new insight and enjoyment not only to students and researchers in the fields of astronomy, physics and earth sciences but also to a wide range of interested amateurs. **The New Cosmos** Albrecht Unsöld, Bodo Baschek, 2013-03-09

Astronomy, astrophysics and space research have developed extensively and rapidly in the last few decades. The new opportunities for observation afforded by space travel, the development of high sensitivity light detectors and the use of powerful computers have revealed new aspects of the fascinating world of galaxies and quasars, stars and planets. The fourth completely revised edition of *The New Cosmos* bears witness to this explosive development. It provides a comprehensive but concise introduction to all of astronomy and astrophysics. It stresses observations and theoretical principles equally, requiring of the reader only basic mathematical and scientific background knowledge. Like its predecessors, this edition of *The New Cosmos* will be welcomed by students and researchers in the fields of astronomy, physics and earth sciences as well as by serious amateur astronomers. The New Cosmos A. Unsöld, B. Baschek, 2013-04-17 to the Second Edition. The development of astronomy in the last ten years has been nothing short of explosive. This second edition of *The New Cosmos* considerably revised and enlarged, tries to share this development with its readers. Let us mention a few key words from modern landings.

planetary probes aid continental drift through pulsars X ray and y ray sources interstellar molecules quasars and the structure and evolution of stars and stellar systems right up to cosmological models As before the most important task of this book is to give a not too difficult introduction to present day astronomy and astrophysics both to the student of astronomy and to the specialist from a neighboring discipline We therefore draw to the attention of the reader as an essential part of our description the numerous illustrations many of them new and their detailed captions As far as possible we link a description of important observations with basic features of the theory On the other hand when it comes to detail we often content ourselves with a brief description leaving the detailed explanation to the specialist literature The transition to the specialist literature should be eased by the Bibliography at the end of the book Important new investigations are noted in the text by their year not so much for historical reasons as to enable the original work to be found in the Astronomy and Astrophysics Abstracts 1969 on
